Fibrous and Textile Materials for Composite Applications Sohel Rana,Raul Fanguero,2016-01-22 This book focuses on the fibers and textiles used in composite materials It presents both existing technologies currently used in commercial applications and the latest advanced research and developments It also discusses the different fiber forms and architectures such as short fibers unidirectional tows directionally oriented structures or advanced 2D and 3D textile structures that are used in composite materials In addition it examines various synthetic natural and metallic fibers that are used to reinforce polymeric cementitious and metallic matrices as well as fiber properties special functionalities manufacturing processes and composite processing and properties Two entire chapters are dedicated to advanced nanofiber and nanotube reinforced composite materials The book goes on to highlight different surface treatments and finishes that are applied to improve fiber matrix interfaces and other essential composite properties Although a great deal of information about fibers and textile structures used for composite applications is already available this is the only book currently available that discusses all types of fibers and structures used to reinforce polymers cement metal or soil to improve their general performance and multi functional behaviors As such it fills an important gap in the available literature and provides a valuable resource for a wide range of students and researchers from academia and industry

The Use of Nano Composites in Automotive Applications Y Charles Lu,Srikanth Pilla,2015-12-18 With their high specific strength and stiffness composites have the potential to significantly lower the vehicle weight which can have a dramatic effect on improving fuel efficiency and reducing greenhouse gas emissions For the past decade or so composites have been experiencing several transitions including the transition from micro scale reinforcement fillers to nano scale reinforcement fillers resulting in the nanocomposite The effectiveness of the nano sized fillers in composites can be explained by one of their unique geometric properties the length to thickness aspect ratio Therefore nano sized fillers have exceptionally higher reinforcing efficiency than the conventional large fillers The effectiveness of the nano sized fillers in composites is also due to their large surface area and surface energy This book consists of a collection of technical papers selected from the automotive composites and other relevant sessions that the editors have organized for the SAE World Congress over the past decade It begins with a section on the perspectives of nanocomposites in the automotive industry with of three excellent papers given by experts from the industry and academia Following it brings to the reader in depth information on the three major nanocomposites categories o Nano fiber reinforced composites o Nano platelet reinforced composites o Nano particle reinforced composites
