Why aren't the elements listed in alphabetical order?

As charts go, the periodic table is a bit odd. It's not square. Large portions of the table appear to be missing at the top. It's not organized alphabetically so elements can be found easily. But to a chemist, the periodic table is a very powerful tool. The periodic table is organized by properties, both chemical and physical. Those properties relate to the electronic structure of the atoms of each element. In today's activity, you are going to study how the ground state electron configurations and structure of atoms are related to the shape and organization of the periodic table.

A blank periodic table grid with the following structure:

- Periods (rows):** 1 to 7.
- Groups (columns):** 1 to 18.
- Blocks:**
 - s-block:** Groups 1 and 2.
 - p-block:** Groups 13 to 18.
 - d-block:** Groups 3 to 10.
 - f-block:** Groups 14 to 17 (located below the main grid).
- Special Cells:**
 - Group 12 (between d and p blocks) is marked with an asterisk (*) in period 6 and a hash (#) in period 7.
 - Group 10 (within the d-block) is marked with an asterisk (*) in period 6 and a hash (#) in period 7.

1. Obtain a card with electron configurations for your group as assigned by your teacher.
 - a. Record your team number_____ and team name _____
 - b. For each element on your card, write the end of the configuration (the underlined portion).
2. What is similar about the last orbital notation appearing at the end of the configuration for each element in your set?

Deciphering the Chemical Code N. D. Epiotis, 1996 This groundbreaking work the culmination of more than 10 years of research presents a breakthrough theory of chemical bonding across the periodic table Professor Epiotis an internationally known and respected member of the theoretical community challenges the conventional chemical concepts that underlie popular theories of chemical bonding Building on his insight that electron electron repulsion is the single crucial variable that differentiates one chemical system from another the author formulates explains and applies a new approach based on nonorthogonal valence bond methodology that amounts to nothing less than a revolutionary unified theory of chemical bonding across the periodic table This work represents the first post Pauling theory of chemical bonding New theory means new formulae and this work is about new chemical formulae that lead to the self consistent rationalization of existing facts and even more important the design of new chemistry
