History of Technology Volume 29 Ian Inkster, 2016-09-30 The common question from the western point of view is of the sort why did China lose its early leadership of productive technologies to Europe during the early modern period Answers to this seemingly clear enquiry vary from general cultural inwardness to the interferences of imperial governance This collection surveys such theories but alters the issue by raising the notion that Chinese technologies did not so much fail as move along a path different from that of Europe Our second collection on the Mindful Hand also shifts common ground by querying and modifying common views of the links

between knowledge and technique in early modern European development Scientific or related knowledge was not brought to technique as a socio cultural gift from an educated elite to the working man Rather educated gents practitioners instrument makers craftsfolk and technicians of all kinds intermingled both socially and in terms of the recognition of technical problems as well as in the assemblage of the mental commercial and cognitive resources required to pursue innovative production projects Agriculture & Philosophy: Agricultural Science in Philosophy Lindsay Falvey,2020-01-01 Agriculture and philosophy have been parts of a whole across history and remain so Philosophy informs wellbeing and contentment amidst the vagaries of existence the primary concern of which has always been security of food Science once known as natural philosophy is a major means of philosophical advance today Agricultural science is presented as comprising all of these components The philosophical quest to be at ease in nature extends from pre historical times into our unknown future and employs diverse vehicles to convey insights across generations via myths legends religion academic study and ritual practices Expressing esoteric concepts has employed agricultural metaphor across the historical era as it has been our most common interaction with nature Continuing as our most widespread human interaction within nature agriculture s role in creating civilization and later its writing eventually led to an urban separation from nature including food production Unifying the philosophy agriculture and agricultural science across cultures and traditions from pre agricultural times through the European Enlightenment to today this work builds on neglected ancient insights Perhaps the most profound of these insights is that our thoughts and actions may be seen as an integral part of nature Rather than being independent agents with free will our fears and guilt may be seen as active forces in the dynamics of nature itself which includes our procurement of food This conception offers a wider interaction than can be comprehended from current popular approaches

The Berkshire Dictionary of Chinese Biography, the first publication of its kind since 1898, is the work of more than one hundred internationally recognized experts from nearly a dozen countries. It has been designed to satisfy the growing thirst of students, researchers, professionals and general readers for knowledge about China. It makes the entire span of Chinese history manageable by introducing the reader to emperors, politicians, poets, writers, artists, scientists, explorers and philosophers who have shaped and transformed China over the course of five thousand years. In 135 entries ranging from 1,000 to 8,000 words and written by some of the world's leading China scholars, the Berkshire Dictionary of Chinese Biography takes the reader from the important, even if possibly mythological figures of ancient China to Communist leaders Mao Zedong and Deng Xiaoping. The in-depth essays provide rich historical context and create a compelling narrative that weaves abstract concepts and disparate events into a coherent story. Cross references between the articles show the connections between times, places, movements, events and individuals. *Chinese History* Endymion Porter Wilkinson, 2000.
