

The book cover features a portrait of J. Craig Venter, a man with a grey beard and balding head, wearing a bright yellow jacket. He is looking directly at the camera with a serious expression. The background is a dramatic sunset or sunrise over a body of water, with a bright light source creating a lens flare effect. On the left side of the cover, there is a vertical graphic of a DNA double helix, with various colored segments (blue, green, yellow, orange, red) and numerical data points (e.g., 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 0.9, 1.0, 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8, 1.9, 2.0, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.7, 2.8, 2.9, 3.0, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9, 4.0, 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, 4.9, 5.0, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.9, 6.0, 6.1, 6.2, 6.3, 6.4, 6.5, 6.6, 6.7, 6.8, 6.9, 7.0, 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8, 7.9, 8.0, 8.1, 8.2, 8.3, 8.4, 8.5, 8.6, 8.7, 8.8, 8.9, 9.0, 9.1, 9.2, 9.3, 9.4, 9.5, 9.6, 9.7, 9.8, 9.9, 1.0).

A Life Decoded My Genome My Life:

A Life Decoded J. Craig Venter, 2008-10-30 Craig Venter is no ordinary scientist and no ordinary man He is the first human being ever to read their own DNA and see the key to life itself Yet in doing so he rocked the establishment and became embroiled in one of the biggest controversies of our age This is the story of his incredible life from teenage rebel and Vietnam medic to daredevil sailor and maverick researcher whose race to unravel the sequence of the human genome made him both hero and pariah Incorporating his own genetic make up into his story this is an electrifying portrait of a man who pushed back the boundaries of the possible

Decoding Our DNA Karen Gunnison Ballen, 2012-08-01 In the mid 1980s some geneticists proposed a daring project to sequence the human genome That meant figuring out the exact order of the three billion chemical pairs that make up human DNA Sequencing the human genome could help scientists understand how our bodies work and help doctors diagnose treat and prevent certain diseases The Human Genome Project launched in 1990 with scientists around the world collaborating on the research They worked slowly and methodically trying to produce the most accurate information possible By 1991 one of these scientists Craig Venter became fed up with the HGP's slow pace He challenged the HGP to move faster and started his own company to compete with the HGP Racing neck and neck the two organizations reached their goal years ahead of schedule But the challenge also led to a bitter public argument especially over who could use the sequence and how This book reveals how ambition persistence ego greed and principle combined often with explosive results in the quest to decode our DNA

A Reasonable God Arnie Berg, 2010-12-04 The last decade has seen an outpouring of new books by Christian authors that present the scientific evidence for cosmic and biological evolution The significance of these details challenges the traditional theological understanding of creation and urges Christ followers to adopt an evolutionary creationist approach Failure to do so puts science and faith on a collision course A Reasonable God identifies the issues synthesizes the viewpoints and encourages readers to step outside their comfort zone and wrestle with some of the ambiguities and uncertainties The book is a great asset for post secondary students who are confronted with the evidences and for church leaders who are looking for a quick way to become better informed

Regulation of Synthetic Biology Alison McLennan, 2018-04-27 This book explores the interplay between regulation and emerging technologies in the context of synthetic biology a developing field that promises great benefits and has already yielded fuels and medicines made with designer micro organisms For all its promise however it also poses various risks Investigating the distinctiveness of synthetic biology and the regulatory issues that arise Alison McLennan questions whether synthetic biology can be regulated within existing structures or whether new mechanisms are needed

Communicating Biological Sciences Richard Elliott, 2016-05-23 Recent scandals in the biosciences have highlighted the perils of communicating science leading many observers to ask questions about the pressures on scientists and the media to hype up claims of scientific breakthroughs Journalists science writers and scientists themselves have to report complex and rapidly

developing scientific issues to society yet work within conceptual and temporal constraints that shape their communication To date there has been little reflection on the ethical implications of science writing and science communication in an era of rapid change Communicating Biological Sciences discusses the ethics of science communication in light of recent developments in biotechnology and biomedicine It focuses on the role of metaphors in the creation of visions and the framing of scientific advances as well as their impact on patterns of public acceptance and rejection trust and scepticism Its rigorous investigation will appeal not only to science writers and scientists but also to scholars of sociology science and technology studies media and journalism

Unreal Objects Kate O'Riordan, 2017-07-20 Science and technology are playing increasingly important roles in our lives New projects in development today will fundamentally shape the world around us and manipulate our lived experience

But how and why are such important scientific and technological projects chosen and what are the consequences of this process In this book Kate O Riordan answers these crucial question She discovers that many objects such as genomes and genomic projects smart grids de extinction projects and biosensors cannot be granted scientific legitimacy and developed without extraordinary amounts of media public relations celebrity endorsements and private investment As a result of these filters only certain projects take centre stage when it comes to funding and political attention O Riordan calls these unreal objects scientific projects and technologies where utopian visions for the future are combined with investment and materialisation in the here and now This attention to these unreal objects hides many current social issues especially injustices and inequalities At the same time they conjure utopian visions for how life might be improved **The Shortest**

New Visions of Nature Martin A. M. Drenthen,F.W. Jozef Keulartz,James Proctor,2009-07-23 *New Visions of Nature* focuses on the emergence of these new visions of complex nature in three domains The first selection of essays reflects public visions of nature that is nature as it is experienced encountered and instrumentalized by diverse publics The second selection zooms in on micro nature and explores the world of contemporary genomics The final section returns to the macro world and discusses the ethics of place in present day landscape philosophy and environmental ethics The contributions to this volume explore perceptual and conceptual boundaries between the human and the natural or between an out there and in here They attempt to specify how nature has been publicly and genomically constructed known and described through

metaphors and re envisioned in terms of landscape and place By parsing out and rendering explicit these divergent views the volume asks for a re thinking of our relationship with nature

The Genealogy of a Gene Myles W. Jackson, 2015-02-20

The history of the CCR5 gene as a lens through which to view such issues as intellectual property Big Pharma personalized medicine and race and genomics In *The Genealogy of a Gene* Myles Jackson uses the story of the CCR5 gene to investigate the interrelationships among science technology and society Mapping the varied genealogy of CCR5 intellectual property natural selection Big and Small Pharma human diversity studies personalized medicine ancestry studies and race and genomics Jackson links a myriad of diverse topics The history of CCR5 from the 1990s to the present offers a vivid illustration of how intellectual property law has changed the conduct and content of scientific knowledge and the social political and ethical implications of such a transformation The CCR5 gene began as a small sequence of DNA became a patented product of a corporation and then when it was found to be an AIDS virus co receptor with a key role in the immune system it became part of the biomedical research world and a potential moneymaker for the pharmaceutical industry When it was further discovered that a mutation of the gene found in certain populations conferred near immunity to the AIDS virus questions about race and genetics arose Jackson describes these developments in the context of larger issues including the rise of biocapitalism the patentability of products of nature the difference between U S and European patenting approaches and the relevance of race and ethnicity to medical research

The Emergence of Sin Matthew Croasmun, 2017 Commentators have long argued about whether to read Paul s personification of Sin in Romans literally or figuratively Matthew Croasmun suggests both that the cosmic power Sin is nothing more than an emergent feature of a vast network of human transgression and that this power is nevertheless a real person

Collecting Experiments Bruno J. Strasser, 2019-06-07 Databases have revolutionized nearly every aspect of our lives Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is how it is produced to whom it belongs and who can be credited for producing it Every scientist working today draws on databases to produce scientific knowledge Databases have become more common than microscopes voltmeters and test tubes and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of data producers collectors curators and analysts *Collecting Experiments* traces the development and use of data collections especially in the experimental life sciences from the early twentieth century to the present It shows that the current revolution is best understood as the coming together of two older ways of knowing collecting and experimenting the museum and the laboratory Ultimately Bruno J Strasser argues that by serving as knowledge repositories as well as indispensable tools for producing new knowledge these databases function as digital museums for the twenty first century
