**Generative Systems and Intelligent Tutoring Systems** Sabine Graf, Angelos Markos, 2025-07-28 This book constitutes the refereed proceedings of the 21st International Conference on Intelligent Tutoring Systems ITS 2025 held in Alexandroupolis Greece during June 2-6 2025. The 21 full papers, 27 short papers and 5 posters included in this book were carefully reviewed and selected from 67 submissions. The papers are organized in the following topical conference tracks: Part I: Generative Tutoring Systems. The goal of this part is to show how new techniques inspired by artificial intelligence (AI) and new methods in education can improve learning, teaching, and generate the capacity for knowledge acquisition and much more. Part II: Application areas, environments, and techniques for AI systems. This part shows the progress of research investigating the different application areas such as education, health, techniques such as neural networks, data mining, natural language processing, and environments such as games, virtual reality, cognitive robots for effective AI systems.

**Aircraft Systems Classifications** Allan Seabridge, Mohammad Radaei, 2022-04-25 *Aircraft Systems Classifications* Enables aerospace professionals to quickly and accurately reference key information about all types of aircraft systems. *Aircraft Systems Classifications: A Handbook of Characteristics and Design Guidelines* provides comprehensive information on aircraft systems delivered in a concise, direct, and standardized way, allowing readers to easily find the information they need. The book presents a full set of characteristics and requirements for all types of aircraft systems, including avionics, mission, and supporting ground systems, in a single volume. Readers can delve further into specific topics by referencing the detailed glossary and bibliography. To aid in reader comprehension, each aircraft system is broken down according to various criteria such as Purpose, description, and safety. Integration with other systems, Key interfaces and design drivers, Modeling and simulation, Best practices, and future trends. Written for aerospace professionals, researchers, and advanced students with some existing knowledge of the aircraft industry, this book allows readers to quickly reference information on every aspect of aircraft systems.

*Aviation and Its Management* Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy, mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge, which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations, education, etc., one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety, management systems, and air traffic management. In

particular attention will be given to aspects such as analysis of air traffic in a domestic market runway safety management systems critical success factors for multiple MRO service providers key pain points of the industry to be addressed to move into the future new research on hub airports for international flights new business models for airlines and runway safety management systems This book is useful to aviation managers educators students and professionals interested in any of the above issues
