AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC The Crash of Air France Flight 447 THE FINAL REPORT George Cramoisi, editor, 2012-09-01 On 31 May 2009 the Airbus A330 flight AF 447 took off from Rio de Janeiro Gale o airport bound for Paris Charles de Gaulle At around 2 h 02 the Captain left the cockpit for a short nap At around 2 h 08 at flight level 350 the crew made a course change of 12 degrees to the left to avoid bad weather At 2h 10min 05 likely following the obstruction of the

Pitot probes by ice crystals the speed indications were incorrect and some automatic systems disconnected The aeroplane's flight path was not controlled by the two copilots They were rejoined 1 minute 30 later by the Captain while the aeroplane was in a stall situation that lasted until the impact with the sea at 2 h 14 min 28 s killing all 228 persons on board It took almost two years to recover the wreck of the aircraft from a depth of 4 000 metres The accident resulted from a succession of events such as inconsistency between the measured airspeeds inappropriate control inputs and the crew's failure to diagnose the stall situation

Air Crash Investigations: Running Out of Fuel, How Air Transat 236 Managed to Fly 100 Miles Without Fuel and Land Safely

George Cramoisi, 2010-02-04 On August 24 2001 Air Transat Flight 236 an Airbus 330 was on its way from Toronto Canada to Lisbon Portugal with 306 people on board Above the Atlantic Ocean the crew noticed a dangerous fuel imbalance The crew changed the planned route for a landing at the Lajes Airport in the Azores At 06 13 the right engine flamed out At 06 26 the left engine also flamed out However after flying 100 miles without fuel the crew managed to land the aircraft at the Lajes Airport at 06 45 After the landing small fires started in the main gear wheels they were extinguished by the crash rescue response vehicles Only 16 passengers and 2 cabin crew members received injuries The aircraft suffered damage to the fuselage and to the main landing gear The investigation uncovered a large crack in the fuel line of the right engine it was caused by mistakes during an engine change just before the start of the flight

Federal Register ,2014-02 Air Crash Investigations: Lost Over the Atlantic, the Mysterious Disappearance of Air France Flight 447

George Cramoisi, 2010-05-24 On 31 May 2009 flight AF447 an Airbus A330 200 took off from Rio de Janeiro bound for Paris At 2 h 10 a position message and some maintenance messages were transmitted by the ACARS automatic system After this nothing was heard of from the aircraft Six days later bodies and airplane parts were found by the French and Brazilian navies All 228 passengers and crew members on board are presumed to have perished in the accident A massive search by air and sea craft for the plane's black boxes failed so far

Advanced Approach Light System

Behrend, Ferdinand, 2017-08-25 The constant growth in aviation requires the introduction of new technologies in order to meet the demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a system based on electromagnetic

radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before reaching the runway threshold Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle clearance limit Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions Therefore it should amount to improve the awareness of the situation regarding constant vertical faults The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants Das stetige Wachstum in der Luftfahrt erfordert die Einf hrung neuer Technologien um der Nachfrage nach steigender Kapazität gerecht zu werden Insbesondere das System Flughafen stellt hierbei oftmals den limitierenden Faktor dar Schlechte Sichtbedingungen und die unzureichende bodenseitige Ausr stung mit Navigationseinrichtungen können für Einschr nkungen in der Aufrechterhaltung des bestehenden Verkehrsflusses sorgen insbesondere bei Landeanfl gen Das konventionelle Instrumentenlandesystem besteht aus einer Vielzahl an technischer Komponenten die hohen Aufwand hinsichtlich Wartung und Betrieb verursachen Kleine Flugh fen sind oft nur teilweise oder gar nicht mit den entsprechenden Bodenkomponenten ausger stet so dass der Flugbetrieb bei bestimmten Sichtbedingungen vollst ndig eingestellt werden muss Neue satellitengest tzte Anflugverfahren bieten die M glichkeit den Flugbetrieb auch bei schlechten Sichtbedingungen aufrechtzuerhalten unabh ngig von der bisher notwendigen Bodeninfrastruktur Diese bieten mittlerweile ebenso eine auf der barometrischen H henmessung oder einem aufgewerteten Satellitensignal basierende vertikale Flugf hrungskomponente

Allerdings besteht mit der Verwendung entsprechender Anflugverfahren auch eine neue mögliche Fehlercharakteristik des vertikalen Flugführungssignals. Ist ein Fehler beim auf elektromagnetischen Funkwellen basierenden Instrumentenlandesystem winkelförmig, dann je näher sich das Luftfahrzeug dem Sender am Boden nähert, umso kleiner wird die absolute Ablage zum Sollanflugweg. Ist dieser bei satellitengestützten Anflügen konstant über den gesamten Endanflug, eine große Abweichung vom Sollanflugweg auch kurz vor Erreichen der Landebahnschwelle kann die Folge sein. Bei schlechten Sichtbedingungen nahe den Minima eines Präzisionsanfluges kann der Fehler oft erst bei Erreichen der Entscheidungshöhe und dem damit verbundenen visuellen Kontakt zu entsprechenden Bodenmerkmalen erkannt werden. Je größer die Ablage zum Sollanflugweg, umso entscheidender ist das unverzügliche Einleiten des Fehlanflugs, um ein Verlassen der entsprechenden Hindernisfreibereiche zu verhindern. Untersuchungen haben gezeigt, dass die aktuell vorhandenen visuellen Merkmale der Anflugbefeuerung nicht ausreichend sein können, die tatsächliche Position bezüglich der Landebahnschwelle und des Sollanflugweges bei Erreichen der Entscheidungshöhe einzuschätzen. Das hier vorgestellte Advanced Approach Light System soll die Cockpitbesatzung als zusätzliches visuelles Merkmal bei der Entscheidung unterstützen und so zur Verbesserung des Situationsbewusstseins hinsichtlich konstanter vertikaler Fehler beitragen. Das neue Befeuerungssystem wurde in einen Flugsimulator integriert und innerhalb zweier Versuchsreihen mit unterschiedlichen Sichtbedingungen und Entscheidungshöhen von lizenzierten Verkehrspiloten getestet. Dabei sollte neben der grundsätzlichen Funktionalität auch die operative Einsetzbarkeit in den bestehenden Ablauf der Handlungsrouinen im Cockpit untersucht werden. Die Ergebnisse der Versuchsreihen haben eine erhebliche Verbesserung im Erkennen vertikaler Fehler mit Hilfe des Advanced Approach Light System aufgezeigt. Die Entscheidung zum Einleiten des Fehlanflugs erfolgte direkt und unverzüglich, wodurch das Luftfahrzeug auch bei sehr niedriger Entscheidungshöhe noch innerhalb des Hindernisfreibereiches blieb. Im Gegensatz dazu wurde bei den Versuchsteilnehmern, denen nicht das neue System zur Verfügung stand, die Entscheidung eher zögerlich und oftmals viel später getroffen, was zu einem Verlassen des Hindernisfreibereiches führte. Das Situationsbewusstsein der Luftfahrzeugführer zum Erkennen vertikaler Fehler beim Erreichen der Entscheidungshöhe wurde durch das Advanced Approach Light System wesentlich erhöht. Die Integration in bestehende Arbeitsrouinen und der operative Einsatz erfolgten bei hoher Akzeptanz problemlos durch die Versuchsteilnehmer.

Just Culture and the Criminalisation of Air Accidents
Simon Daniels, 2024-12-30. *Just Culture and the Criminalisation of Air Accidents* equips the reader with the tools to understand the meaning of criminalisation in the civil aviation industry. It enables them to resolve problems that arise in risk management within the context of their professional employment. By examining the priorities of pilots, air traffic controllers and prosecutors, this book analyses the anatomy of criminalisation in civil aviation and works towards constructing solutions that protect the professionals' human rights and the Just Culture concept within the framework of criminal law and practice. It covers the duty of an air traffic controller to take the standard of care to guard against acts or omissions which might cause

loss and give rise to a claim in negligence The book illustrates the critical features discussed with numerous case studies from States and jurisdictions around the world The book will benefit airline operators pilots air traffic controllers or managers and aviation business managers Facing the Unexpected in Flight Jean Pinet,2015-10-28 Airline pilots often have to face sudden unexpected situations that can become potentially dangerous They are trained to deal with these situations but sometimes the lack of time before the situation deteriorates and the associated stress can compromise their basic cognitive sequence and lead to a serious incident or even an accident This book identifies common denominators in pilots reactions to dangerous unexpected events and highlights behavior common to all in complex stressful situations Facing the Unexpected in Flight Human Limitations and Interaction with Technology attempts to clarify the human characteristics at play in stressful situations with the goal of providing a more solid basis for designing aeronautical operating equipment and shaping future automation The book applies an original cognitive analysis method to highlight actual operational behavior within a quick succession of short mental segments lasting less than one minute in all This rational method of assessing human potential should contribute to a more effective distribution of roles and help to optimize the pilot aircraft interface The current drive towards total automation together with the drone revolution and questions of cost effectiveness within a global economy raises the question of whether there is a need for pilots onboard aircraft So after scientifically dissecting human limitations and advantages in terms of flying an aircraft the book concludes with reflections by the author on the possibility and implications of eliminating pilots from aircraft In this section the author sets aside scientific rigor and provides his sometimes subjective personal opinions on the professional future of airline pilots Advanced Aircraft Flight Performance Antonio Filippone,2012-12-17 This unique book deals with the aeroplane at several levels and aims to simulate its flight performance using computer software *Aircraft System Safety* Duane Kritzing,2016-09-12 Aircraft System Safety Assessments for Initial Airworthiness Certification presents a practical guide for the novice safety practitioner in the more specific area of assessing aircraft system failures to show compliance to regulations such as FAR25 1302 and 1309 A case study and safety strategy beginning in chapter two shows the reader how to bring safety assessment together in a logical and efficient manner Written to supplement not replace the content of the advisory material to these regulations e g AMC25 1309 as well as the main supporting reference standards e g SAE ARP 4761 RTCA DO 178 RTCA DO 154 this book strives to amalgamate all these different documents into a consolidated strategy with simple process maps to aid in their understanding and optimise their efficient use Covers the effect of design manufacturing and maintenance errors and the effects of common component errors Evaluates the malfunctioning of multiple aircraft components and the interaction which various aircraft systems have on the ability of the aircraft to continue safe flight and landing Presents and defines a case study an aircraft modification program and a safety strategy in the second chapter after which each of the following chapters will explore the theory of the technique required and then apply the theory to the case study Written In the Sky Mark

Carr,2020-07-29 Since childhood Mark Carr wanted to fly and fly he did firstly as a naval aviator a jet instructor and later pilot with Cathay Pacific Airways This techno biography is written for those who like him seemingly have hydraulic oil flowing through their veins The book also gives readers of a non flying background an insight into military and civil aviation Sit in the cockpit with Mark and gain a rare insight into how these amazing machines work and how the men and women in the cockpits and flight decks operate them safely and efficiently His story is also entwined with historical context including his first hand account of the infamous Australian Pilots Dispute of 1989 and life as an expatriate in Hong Kong

The Major Projects Report 2012 Great Britain: National Audit Office,2013-01-10 In respect of its largest defence projects there are early signs that the Ministry of Defence has begun to make realistic trade offs between cost time technical requirements and the amount of equipment to be purchased Nevertheless the continuing variances to cost and time show the MOD needs to do consistently better This report which gives a progress review of the 16 largest defence projects shows that in the last year there has been a total forecast slippage of 139 months and increase in costs of 468 million This means that since the projects were approved costs have increased by 6.6 billion around 12 per cent more than the planned cost and the projects have been delayed by 468 months taking almost a third longer than originally expected It would be unrealistic to expect MOD and industry to identify every risk at the start of technically challenging projects However the continuing problems indicate that MOD has more to learn from historic The MOD is accepting the capability risk and some wider costs resulting from these project delays and is having to make difficult decisions about long term capabilities The MOD has made a significant investment in new and upgraded helicopters to address the shortfall identified in the NAO s 2004 report The MOD has also spent 787 million on air transport and air to air refuelling aircraft to support current operations and address capability gaps such as those caused by the previously reported delays to the A400M transport aircraft However capability gaps remain
