Clustering and Resampling, a Simple Model to Diagnose <sup>1</sup>CDT, explaining how to create and visualize a very simple model composed of only one part. In the referenced tutorial for the experienced Abacus user you will create and analyze a more complex model. The article in these chapters has been revised.

- It separates all three different parts rather than just one. This vertical illustration shows you position instructions of these parts to create the assembly and how you define correct reference surfaces of the assembly.
- It includes parts that you will draw using advanced sketching techniques. You will learn how sketches, datum planes, and coordinate systems, to define the features that make up individual parts. You will also learn how you can modify a part by adding a feature and how finished parts are reassembled.

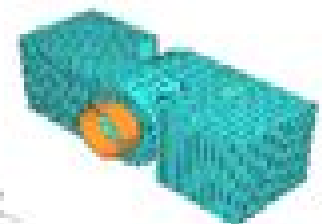

As in *Creating and Analyzing a Simple Model in Abaqus/CAE*, you will apply material properties, loads, and boundary conditions to the model; you will also mesh the model, configure the analysis, and run the analysis job. At the end of the tutorial you will view your analysis results. The entire tutorial takes approximately three hours to complete.

This tutorial assumes that you are familiar with the techniques described in *Creating and Training a Simple Model in AllenNLP*, including the following:

- Using the view manipulation tools to rotate and zoom an object in the viewport.
