A Window Into Zeta and Modular Physics Klaus Kirsten, Floyd L. Williams, 2010-05-24 Consists of lectures that are part of the MSRI workshops and that introduce students and researchers to the intriguing world of theoretical physics Some Musings on Theta, Eta, and Zeta Floyd L. Williams, 2023-11-02 This book continues the applications of mathematics more specifically of theta eta and zeta functions and modular forms to various areas of theoretical physics It is a follow up and extension in some sense of the author's earlier book entitled A window into zeta and modular physics Some of the main topics are 1 A new approach to logarithmic corrections to black hole entropy 2 My recent work that provides for an explicit cold plasma black hole connection 3 Generalization of work of physicists on certain asymptotic problems relating to string theory for example by way of the general theory of modular forms of non positive weight 4 A construction of the E8 root lattice its theta function and its relevance for heterotic string theory 5 Applications of elliptic functions to KdV nonlinear Schrödinger and Duffing equations for example including a discussion of Lax pairs and the Miura transformation 6 Finite temperature zeta functions and partition functions for quantum fields in thermal equilibrium on various curved background spacetimes 7 Exact solutions of the Einstein gravitational field equations for Lemaitre and inhomogeneous cosmological models with a special focus on the Szekeres-Szafron exact solutions by way of the Weierstrass elliptic function 8 Elementary particles and my zeta function formula for higher spin fermionic particles this covers in particular the gravitino particle of spin $3/2$ and bosons with integral spin $s = 2, 3, 4, 5$ These are some sample topics Others include the continuous Heisenberg model reaction diffusion systems Dirichlet and Hecke L functions the modular j invariant the computation of the one loop effective potential for non compact symmetric spaces the BTZ black hole Jacobi inversion formulas etc Thus there is a very large range of material with the first 9 chapters of preliminary expository background for mathematicians and physicists **The**

sine-Gordon Model and its Applications Jesús Cuevas-Maraver, Panayotis G. Kevrekidis, Floyd Williams, 2014-07-22 The sine Gordon model is a ubiquitous model of Mathematical Physics with a wide range of applications extending from coupled torsion pendula and Josephson junction arrays to gravitational and high energy physics models The purpose of this book is to present a summary of recent developments in this field incorporating both introductory background material but also with a strong view towards modern applications recent experiments developments regarding the existence stability dynamics and asymptotics of nonlinear waves that arise in the model This book is of particular interest to a wide range of researchers in this field but serves as an introductory text for young researchers and students interested in the topic The book consists of well selected thematic chapters on diverse mathematical and physical aspects of the equation carefully chosen and assigned

Differential and Difference Equations with Applications Sandra Pinelas, Tomás Caraballo, Peter Kloeden, John R. Graef, 2018-05-08 This book gathers papers from the International Conference on Differential Difference Equations and Applications 2017 ICDDEA 2017 held in Lisbon Portugal on June 5-9 2017 The editors have compiled the strongest research

presented at the conference providing readers with valuable insights into new trends in the field as well as applications and high level survey results The goal of the ICDDEA was to promote fruitful collaborations between researchers in the fields of differential and difference equations All areas of differential and difference equations are represented with a special emphasis on applications

Conformal Field Theory, Automorphic Forms and Related Topics Winfried Kohnen, Rainer Weissauer, 2014-08-22 This book part of the series Contributions in Mathematical and Computational Sciences reviews recent developments in the theory of vertex operator algebras VOAs and their applications to mathematics and physics The mathematical theory of VOAs originated from the famous monstrous moonshine conjectures of J H Conway and S P Norton which predicted a deep relationship between the characters of the largest simple finite sporadic group the Monster and the theory of modular forms inspired by the observations of J MacKay and J Thompson The contributions are based on lectures delivered at the 2011 conference on Conformal Field Theory Automorphic Forms and Related Topics organized by the editors as part of a special program offered at Heidelberg University that summer under the sponsorship of the Mathematics Center Heidelberg MATCH

Topology of Stratified Spaces Greg Friedman, 2011-03-28 This book explores the study of singular spaces using techniques from areas within geometry and topology and the interactions among them

Commutative Algebra and Noncommutative Algebraic Geometry David Eisenbud, Srikanth B. Iyengar, Anurag K. Singh, J. Toby Stafford, Michel Van den Bergh, 2015-11-19 This book surveys fundamental current topics in these two areas of research emphasising the lively interaction between them Volume 1 contains expository papers ideal for those entering the field

Inverse Problems and Applications Gunther Uhlmann, 2013 Inverse problems lie at the heart of contemporary scientific inquiry and technological development Applications include a variety of medical and other imaging techniques which are used for early detection of cancer and pulmonary edema location of oil and mineral deposits in the Earth's interior creation of astrophysical images from telescope data finding cracks and interfaces within materials shape optimization model identification in growth processes and modeling in the life sciences among others The expository survey essays in this book describe recent developments in inverse problems and imaging including hybrid or couple physics methods arising in medical imaging Calderon's problem and electrical impedance tomography inverse problems arising in global seismology and oil exploration inverse spectral problems and the study of asymptotically hyperbolic spaces It is suitable for graduate students and researchers interested in inverse problems and their applications

Noncommutative Algebraic Geometry Gwyn Bellamy, Daniel Rogalski, Travis Schedler, J. Toby Stafford, Michael Wemyss, 2016-06-20 This book provides a comprehensive

introduction to the interactions between noncommutative algebra and classical algebraic geometry Current Developments in Algebraic Geometry Lucia Caporaso, 2012-03-19 This volume based on a workshop by the MSRI offers an overview of the state of the art in many areas of algebraic geometry **Hamiltonian Systems** Albert Fathi, Philip J. Morrison, Tere M-Seara, Sergei Tabachnikov, 2024-05-09 A selection of results spanning a broad spectrum of disciplines from the MSRI program on Hamiltonian Systems during Fall 2018 *Games of No Chance 5* Urban Larsson, 2019-05-09 Surveys the state of the art in combinatorial game theory that is games not involving chance or hidden information Games of No Chance 4 Richard J. Nowakowski, 2015-04-16 Combinatorial games are the strategy games that people like to play for example chess Hex and Go They differ from economic games in that there are two players who play alternately with no hidden cards and no dice These games have a mathematical structure that allows players to analyse them in the abstract Games of No Chance 4 contains the first comprehensive explorations of mis re last player to move loses games extends the theory for some classes of normal play last player to move wins games and extends the analysis for some specific games It includes a tutorial for the very successful approach to analysing mis re impartial games and the first attempt at using it for mis re partisan games Hex and Go are featured as well as new games Toppling Dominoes and Maze Updated versions of Unsolved Problems in Combinatorial Game Theory and the Combinatorial Games Bibliography complete the volume **Thin Groups and Superstrong Approximation** Emmanuel Breuillard, Hee Oh, 2014-02-17 This collection of survey articles focuses on recent developments at the boundary between geometry dynamical systems number theory and combinatorics **Symplectic, Poisson, and Noncommutative Geometry** Tohru Eguchi, Yakov Eliashberg, Yoshiaki Maeda, 2014-08-25 This volume contains seven chapters based on lectures given by invited speakers at two May 2010 workshops held at the Mathematical Sciences Research Institute *Mathematical Reviews*, 1997 *Who's who in Frontier Science and Technology*, 1984 Some Musings on Theta, Eta, and Zeta Floyd L.
