Low-Volume Road Engineering Robert A. Douglas, 2018-10-09 Everything that sustains us grown mined or drilled begins its journey to us on a low volume road Long Defined as roads with traffic volumes of no more than 400 vehicles per day they have enormous impacts on economies communication and social interaction Low volume roads comprise at one end of the spectrum farm to market roads roads in developing countries northern roads roads on aboriginal lands and parklands and at the other end of the spectrum heavy haul roads for mining oil and gas oil sands extraction and forestry Low

Volume Road Engineering Design Construction and Maintenance gives an international perspective to the engineering design of low volume roads and their construction and maintenance. It is a single reference drawing from the dispersed literature. It lays out the basic principles of each topic from road location and geometric design, pavement design, slope stability and erosion control through construction to maintenance, then refers the reader to more comprehensive treatment elsewhere. Wherever possible, comparisons are made between the standard specifications and practices existing in the US, Canada, the UK, South Africa, Australia, and New Zealand. Topics covered include the following: Road classification, location and geometric design, Pavement concepts, materials and thickness design, Drainage, erosion and sediment control, and water crossings, Slope stability, Geosynthetics, Road construction, maintenance and maintenance management. Low Volume Road Engineering Design Construction and Maintenance is a valuable reference for engineers, planners, designers, and project managers in consulting firms, contracting firms, and NGOs. It also is an essential reference in support of university courses on transportation engineering and planning and on mining, oil and gas, and forestry infrastructure.

8th RILEM International Conference on Mechanisms of Cracking and Debonding in Pavements Armelle Chabot,William G. Buttlar,Eshan V. Dave,Christophe Petit,Gabriele Tebaldi,2016-05-25

This book presents the latest advances in research to analyze mechanical damage and its detection in multilayer systems The contents are linked to the Rilem TC241 MCD scientific activities and the proceedings of the 8th RILEM International Conference on Mechanisms of Cracking and Debonding in Pavements MCD2016 MCD2016 was hosted by Ifsttar and took place in Nantes France on June 7 9 2016 In their lifetime pavements undergo degradation due to different mechanisms of which cracking is

among the most important ones. The damage and the fracture behavior of all its material layers as well as interfaces must be understood. In that field, the research activities aim to develop a deeper fundamental understanding of the mechanisms responsible for cracking and debonding in asphalt concrete and composite e.g. asphalt overlays placed on PCC or thin cement concrete overlay placed on asphalt layer pavement systems.
