Iteration Theory - Proceedings Of The European Conference C Simo,Christian Mira,Gyoergy Targonski,Norbert Netzer,1991-07-22 The main topics of this proceedings stress the interactions between the theory of functional equations and the theory of dynamical systems A total of 38 invited lectures are included **Iteration Theory (Ecit 91) - Proceedings Of The European Conference** J P Lampreia,Jaume Llibre,Christian Mira,Gyoergy Targonski,Jose Sousa Ramos,1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations European Conference on Iteration Theory (1987 Claudi Alsina,1989 **European Conference on Iteration Theory** Claudi Alsina,1989 Iteration Theory - Proceedings Of The European Conference W Forg-rob,Norbert Netzer,Christian Mira,Gyoergy Targonski,Detlef Gronau,1996-07-03 Iteration theory has its roots in the operation of substituting functions into itself This has led to questions like that of the behaviour of functions by repeating this substitution and when the number of iterations tends to infinity The terms orbit and chaos appropriately describe this behaviour Dynamical systems and the theory of functional equations play important roles in this field Combinatorial Dynamics And Entropy In Dimension One (2nd Edition) Luis Alseda,Jaume Llibre,Michal Misiurewicz,2000-10-31 This book introduces the reader to the two main directions of one dimensional dynamics The first has its roots in the Sharkovskii theorem which describes the possible sets of periods of all cycles periodic orbits of a continuous map of an interval into itself The whole theory which was developed based on this theorem deals mainly with combinatorial objects permutations graphs etc it is called combinatorial dynamics The second direction has its main objective in measuring the complexity of a system or the degree of chaos present in it for that the topological entropy is used The book analyzes the combinatorial dynamics and topological entropy for the continuous maps of either an interval or the circle into itself **Aggregating clones, colors, equations, iterates, numbers, and tiles** Janos Aczel,2012-12-06 The journal aequationes mathematicae publishes papers in pure and applied mathematics and in particular articles on functional equations combinatorics and dynamical systems Its 50th volume appears in 1995 To mark this occasion we are publishing in book form a repre sentative collection of outstanding survey papers assembled for our anniversary issue of aequationes mathematicae The articles by Quackenbush Targonski and Moszner discuss composition of functions from different points of view universal algebra dynamical systems iteration and functional equa tions The Ono Robbins Wahl and the Vince papers on number theory and tiles respectively are thematically linked by lattices Combinatorics

in turn links the Vince paper with that of Tutte whose subject is chromatic sums its tools differential and functional equations The Paganoni Ratz and the Forti papers deal with conditional functional equations and with the related topic of stability Applications to the social and behavioral sciences in particular to aggregation and some theory are presented in the paper by J Aczel The aim of the collection is to survey selected fields of current interest We trust that it will be useful and informative for researchers teachers graduate and advanced undergraduate stu dents of mathematics and for those interested in applications in related fields lanDs Aczel Aequationes Mathematicae 50 1995 1 0001 9054 95 020001 01 1 50 0 20 0 University of Waterloo 1995 Birkhiiuser Verlag Basel Editorial Volume 50 of Aequationes Mathematicae This is the fiftieth volume of aequationes mathematicae Not only our modesty but also lack of space keeps us from self congratulation

Iteration Theory (ECIT '04) ,2006 **Nielsen Theory and Dynamical Systems** Christopher Keil McCord,1993 This volume contains the proceedings of the AMS IMS SIAM Joint Summer Research Conference on Nielsen Theory and Dynamical Systems held in June 1992 at Mount Holyoke College Focusing on the interface between Nielsen fixed point theory and dynamical systems this book provides an almost complete survey of the state of the art of Nielsen theory Most of the articles are expository and provide references to more technical works making them accessible to both graduate students and researchers in algebraic topology fixed point theory and dynamical systems **Proceedings of the Sixth International Conference on Difference Equations Augsburg, Germany 2001** Bernd Aulbach,Saber N. Elaydi,G. Ladas,2004-06-07 This volume comprises selected papers presented at the Sixth International Conference on Difference Equations which was held at Augsburg Germany It covers all themes in the fields of discrete dynamical systems and ordinary and partial difference equations classical and contemporary theoretical and applied It provides a useful reference text for graduates and researchers working in this area of mathematics **Studies on Composition Operators** Rocky Mountain Mathematics Consortium,1998 This book reflects the proceedings of the 1996 Rocky Mountain Mathematics Consortium conference on Composition Operators on Spaces of Analytic Functions held at the University of Wyoming The readers will find here a collection of high quality research and expository articles on composition operators in one and several variables The book highlights open questions and new advances in the classical areas and promotes topics which are left largely untreated in the existing texts In the past two decades the study of composition operators has experienced tremendous growth Many connections between the study of these operators on various function spaces and other branches of analysis have been established Advances in establishing criteria for membership in different operator classes have led to progress in the study of the spectra adjoints and iterates of these operators More recently connections between these operators and the study of the invariant subspace problem functional equations and dynamical systems have been exploited Iteration Theory (ECIT '06) Gian Luigi Forti,2007 Dynamic Bifurcations Eric Benoit,2006-11-14 Dynamical Bifurcation Theory is concerned with the phenomena that occur in one parameter families of dynamical systems usually ordinary differential

equations when the parameter is a slowly varying function of time During the last decade these phenomena were observed and studied by many mathematicians both pure and applied from eastern and western countries using classical and nonstandard analysis It is the purpose of this book to give an account of these developments The first paper by C Lobry is an introduction the reader will find here an explanation of the problems and some easy examples this paper also explains the role of each of the other paper within the volume and their relationship to one another CONTENTS C Lobry Dynamic Bifurcations T Erneux E L Reiss L J Holden M Georgiou Slow Passage through Bifurcation and Limit Points Asymptotic Theory and Applications M Canalis Durand Formal Expansion of van der Pol Equation Canard Solutions are Gevrey V Gautheron E Isambert Finitely Differentiable Ducks and Finite Expansions G Wallet Overstability in Arbitrary Dimension F Diener M Diener Maximal Delay A Fruchard Existence of Bifurcation Delay the Discrete Case C Baesens Noise Effect on Dynamic Bifurcations the Case of a Period doubling Cascade E Benoit Linear Dynamic Bifurcation with Noise A Delcroix A Tool for the Local Study of Slow fast Vector Fields the Zoom S N Samborski Rivers from the Point ofView of the Qualitative Theory F Blais Asymptotic Expansions of Rivers I P van den Berg Macroscopic Rivers   *Chaos in Automatic Control* Wilfrid Perruquetti,Jean-Pierre Barbot,2018-10-03 Chaotic behavior arises in a variety of control settings In some cases it is beneficial to remove this behavior in others introducing or taking advantage of the existing chaotic components can be useful for example in cryptography Chaos in Automatic Control surveys the latest methods for inserting taking advantage of or removing chaos in a variety of applications This book supplies the theoretical and pedagogical basis of chaos in control systems along with new concepts and recent developments in the field Presented in three parts the book examines open loop analysis closed loop control and applications of chaos in control systems The first section builds a background in the mathematics of ordinary differential and difference equations on which the remainder of the book is based It includes an introductory chapter by Christian Mira a pioneer in chaos research The next section explores solutions to problems arising in observation and control of closed loop chaotic control systems These include model independent control methods strategies such as H infinity and sliding modes polytopic observers normal forms using homogeneous transformations and observability normal forms The final section explores applications in wireless transmission optics power electronics and cryptography Chaos in Automatic Control distills the latest thinking in chaos while relating it to the most recent developments and applications in control It serves as a platform for developing more robust autonomous intelligent and adaptive systems

Chaotic Dynamics in Two-dimensional Noninvertible Maps C. Mira,1996 This book is essentially devoted to complex properties Phase plane structure and bifurcations of two dimensional noninvertible maps i e maps having either a non unique inverse or no real inverse according to the plane point They constitute models of sets of discrete dynamical systems encountered in Engineering Control Signal Processing Electronics Physics Economics Life Sciences Compared to the studies made in the one dimensional case the two dimensional situation remained a long time in an underdeveloped state It is only

since these last years that the interest for this research has increased Therefore the book purpose is to give a global presentation of a matter available till now only in a partial form Fundamental notions and tools such as critical manifolds as the most part of results are accompanied by many examples and figures <u>Equadiff 95 - Proceedings Of The International Conference On Differential Equations</u> L Magalhaes,Carlos Rocha,L Sanchez,1998-04-30 In this volume leading experts on differential equations address recent advances in the fields of ordinary differential equations and dynamical systems partial differential equations and calculus of variations and their related applications <u>Predictability, Stability, and Chaos in N-Body Dynamical Systems</u> Archie E. Roy,2012-12-06 The reader will find in this volume the Proceedings of the NATO Advanced Study Institute held in Cortina d Ampezzo Italy between August 6 and August 17 1990 under the title Predictability Stability and Chaos in N Body Dynamical Systems The Institute was the latest in a series held at three yearly inter vals from 1972 to 1987 in dynamical astronomy theoretical mechanics and celestial mechanics These previous institutes held in high esteem by the international community of research workers have resulted in a series of well received Proceedings The 1990 Institute attracted 74 participants from 16 countries six outside the NATO group Fifteen series of lectures were given by invited speakers additionally some 40 valuable presentations were made by the younger participants most of which are included in these Proceedings The last twenty years in particular has been a time of increasingly rapid progress in tackling long standing and also newly arising problems in dynamics of N body systems point mass and non point mass a rate of progress achieved because of correspondingly rapid developments of new computer hardware and software together with the advent of new analytical techniques It was a time of exciting progress culminating in the ability to carry out research programmes into the evolution of the outer Solar 8 System over periods of more than 10 years and to study star cluster and galactic models in unprecedented detail <u>Index of Conference Proceedings</u> ,1993 **Sharkovsky Ordering** Alexander M. Blokh,Oleksandr M. Sharkovsky,2022-09-05 This book provides a comprehensive survey of the Sharkovsky ordering its different aspects and its role in dynamical systems theory and applications It addresses the coexistence of cycles for continuous interval maps and one dimensional spaces combinatorial dynamics on the interval and multidimensional dynamical systems Also featured is a short chapter of personal remarks by O M Sharkovsky on the history of the Sharkovsky ordering the discovery of which almost 60 years ago led to the inception of combinatorial dynamics Now one of cornerstones of dynamics bifurcation theory and chaos theory the Sharkovsky ordering is an important tool for the investigation of dynamical processes in nature Assuming only a basic mathematical background the book will appeal to students researchers and anyone who is interested in the subject **Annales Mathematicae Silesianae** ,1999
