Guidance manual - a compilation of actor-relevant content extracted from scientific results of the INNOVATE project Siegmund-Schultze, Marianna, 2017-05-16 INNOVATE was a comprehensive collaborative and binational research project. It ran from January 2012 through December 2016. Brazil and Brazil's Northeast in particular suffered from a severe drought period from 2012 onwards. Management and governance of natural resources faced serious challenges related to access to water. Important long term drivers that call for recurrent adaptation of actions are land use change, population growth, climate change and conflicts from the multiple uses of water. The scientific project addressed this complex situation through research aimed at suggesting practices and pathways towards ecologically and socioeconomically sound management of land, water and biodiversity. The INNOVATE project had one focus on the entire watershed of the São Francisco River and another one on a portion of the watershed, the Itaparica Reservoir and the semi arid area north of the artificial lake. Researchers with different backgrounds worked within their disciplines in groups, interdisciplinary and together with stakeholders transdisciplinary. The Guidance Manual is a compilation of actor relevant content extracted from the scientific research results. Most recommendations put forward can be adapted as principles and standards for reservoir and semi arid regions elsewhere in the world. INNOVATE war ein umfassendes binationales Verbundforschungsprojekt zwischen Brasilien und Deutschland mit einer Kernlaufzeit von Januar 2012 bis Dezember 2016. Im Jahr 2012 begann eine besonders schwere Dürreperiode, welche nicht nur den sowieso trockenen Nordosten Brasiliens traf, sondern auch weitere Teile des Landes. Die stark eingeschränkte Wasserverfügbarkeit wurde zum zentralen Thema von Management und Governance der natürlichen Ressourcen. Wichtige langfristige Treiber, welche eine kontinuierliche Anpassung des Handelns notwendig machen, sind Landnutzungsänderungen, Bevölkerungswachstum, Klimawandel und Konflikte um die verschiedenen Wassernutzungsansprüche. Im Projekt wurden Praktiken und Ansätze zur ökologisch und sozial ökonomisch vertretlichen Bewirtschaftung von Wasser, Land und Biodiversität entwickelt. Das Studiengebiet des INNOVATE Projekts umfasste dabei das gesamte Wassereinzugsgebiet des São Francisco Flusses, wobei Feldforschung im semi ariden

Municipal Wastewater Treatment Advanced Technologies in Wastewater Treatment provides updated information on existing technologies for municipal wastewater treatment The book focuses on efficient technologies and environmental control strategies in the field of municipal wastewater and covers below listed strategies that can be used in municipal wastewater treatment depending on the specific needs and goals of the treatment plant

- a Preliminary treatment This involves screening out large objects like sticks rocks and plastics and removing grit and sand that can damage pumps and other equipment
- b Primary treatment In this stage wastewater is settled in large tanks allowing solids to settle to the bottom and oils and greases to rise to the surface where they can be skimmed off
- c Secondary treatment This stage uses biological processes to further treat the wastewater One common method is the activated sludge

process which involves aerating the wastewater and adding microorganism that consumes organic matter Another method is the trickling filter process which uses a bed of rocks of other materials to support microorganisms that break down organic matter d Tertiary treatment This is an optional stage that can be used to further remove nutrients pathogens and other pollutants from the wastewater Common methods include sand filtration membrane filtration and disinfection with chemicals like chlorine or ultraviolet light e Sludge treatment and disposal The solids that are removed during primary and secondary treatment known as sludge must be further treated before they can be safely disposed of or used Common methods include anaerobic digestion composting and drying Municipal Wastewater Treatment sheds light and gives a broad but very detailed view on above mentioned issues from an industrial chemical engineering point of view Includes latest developments in municipal wastewater treatment Describes emerging technologies for pollution control Considers the integration of conventional and innovative procedures to decrease waste energy and water use
