Weinandy, 2021-03-26 Jesus Becoming Jesus Volume 2 A Theological Interpretation of the Gospel of John Prologue and the Book of Signs follows upon the first volume of this series entitled Jesus Becoming Jesus The first volume was a theological interpretation of the Gospels of Matthew Mark and Luke Unlike many conventional biblical commentaries Weinandy concentrates on the theological content contained within John s Gospel He does this in the light of the Church s doctrinal and theological tradition particularly in keeping with the Second Vatican Council s Dogmatic Constitution Dei Verbum This is accomplished through a close reading of John s Gospel theologically interpreting each chapter of the Gospel sequentially In so doing he also takes into account the Johannine corpus as a whole He also relates John s Gospel to relevant material found within the Synoptic Gospels the Pauline Corpus and other New Testament writings This original theological interpretation focuses primarily on the intertwining theological themes contained within John s Gospel specifically within the Prologue and the Book of Signs light and darkness the seven miracle signs the sacraments of baptism and the Eucharist the seven I Am sayings the contentious dialogues with the Jews Jesus relationship to his Father as the Father s incarnate Word and Son etc Within all of these interlocking themes one finds the importance of Jesus saving actions the salvific works of his Father The overarching theme of this book as the title suggests is that Jesus being named Jesus throughout his public ministry is enacting his name and so becoming who he is YHWH Saves Weinandy offers a singular vibrant and luminous reading of John s Gospel one that reveals the Evangelist s theological depth and doctrinal sophistication In so doing Weinandy makes manifest the particular beauty of the Gospel According to John *OCEANOGRAPHY- Volume II* Chen-Tung Arthur Chen, Jacques C. students Femtochemistry: Ultrafast Dynamics Of The Chemical Bond (In 2 Volumes) - Volume 2 Ahmed H
Zewail, 1994-09-12 These two volumes on Femtochemistry present a timely contribution to a field central to the
understanding of the dynamics of the chemical bond This century has witnessed great strides in time and space resolutions
down to the atomic scale providing chemists biologists and physicists with unprecedented opportunities for seeing
microscopic structures and dynamics Femtochemistry is concerned with the time resolution of the most elementary motions
of atoms during chemical change bond breaking and bond making on the femtosecond 10⁻¹⁵ second time scale This atomic
scale of time resolution has now reached the ultimate for the chemical bond and as Lord George Porter puts it chemists are
near the end of the race against time These two volumes cover the general concepts techniques and applications of
femtochemistry Professor Ahmed Zewail who has made the pioneering contributions in this field has from over 250
publications selected the articles for this anthology These volumes begin with a commentary and a historical chronology of
the milestones He then presents a broad perspective of the current state of knowledge in femtochemistry by researchers
around the world and discusses possible new directions In the words of a colleague it is a must on the reading list for all of
my students all readers will find this to be an informative and valuable overview The introductory articles in Volume I provide
reviews for both the non experts as well as for experts in the field This is followed by papers on the basic concepts For
applications elementary reactions are studied first and then complex reactions Volume I is complete with studies of solvation
dynamics non reactive systems ultrafast electron diffraction and the control of chemical reactions Volume II continues with
reaction rates the concept of elementary intramolecular vibrational energy redistribution IVR and the phenomena of
rotational coherence which has become a powerful tool for the determination of molecular structure via time resolution The
second volume ends with an extensive list of references according to topics based on work by Professor Zewail and his group
at Caltech These collected works by Professor Zewail will certainly be indispensable to both experts and beginners in the
field The author is known for his clarity and for his creative and systematic contributions These volumes will be of interest
and should prove useful to chemists biologists and physicists As noted by Professor J Manz Berlin and Professor A W
