

## Bauman Chapter 24 Answers to Critical Thinking Questions

p. 682

The United States and Russia have repeatedly agreed to destroy their stocks of the smallpox virus, but the deadline for destruction has been postponed numerous times. In the meantime, the entire genome of variola major has been sequenced. What reasons can governments cite for maintaining smallpox viruses? Should all laboratory stores of smallpox viruses be destroyed? Given that the genome of the virus has been sequenced, and that DNA can be reconstructed if the sequence of nucleotides is known, would elimination of all laboratory stocks really be the extinction of the smallpox virus?

No treatment for smallpox exists and the vaccine used to prevent smallpox infection is problematic. In the face of the possibility that smallpox might be used as a weapon by bioterrorists, governments can argue that the virus should not be destroyed until a treatment and a better vaccine can be developed. Even with the complete genome sequence, the basis for the virulence of smallpox is not understood. Destruction of the laboratory stocks of smallpox will no longer mean the true extinction of the smallpox virus, since the full genomic sequence makes it possible for those having sufficient knowledge, skill, and resources to reconstruct the virus, although it would be no easy task.

p. 687

After a patient complains that his eyes are extremely sensitive to light and feel gritty, his doctor informs him that he has ocular herpes. What causes ocular herpes? Which herpes simplex virus, type 1 or type 2, is more likely to cause ocular herpes? Why?

Herpes simplex virus introduced into the eye, e.g. by rubbing a cold sore and then the eye, leads to ocular herpes. Herpes simplex virus type 1 is more likely to cause ocular herpes because it is the infecting virus in about 90% of oral herpes and proximity makes the mouth area the most likely source of transferred virus.

p. 690

Whereas many doctors are convinced that Epstein-Barr virus causes chronic fatigue syndrome, others deny the association between EBV and the syndrome. Why is the etiology of chronic fatigue syndrome debated when Epstein-Barr virus is present in most cases?

Epstein-Barr virus is present in a large percentage of the population (around 70% of US adults), so its' presence in a person suffering from chronic fatigue syndrome is not evidence of a causal relationship. Determining the etiology of chronic fatigue syndrome is also hindered by the fact that many physicians do not believe that the syndrome is real.

p. 702

1. Most DNA viruses replicate within the nucleus of a host cell, using host enzymes to replicate their DNA. In contrast, poxviruses replicate in the cytoplasm of host cells. What problem does this create for poxvirus replication? How could the virus overcome this problem?
