Models and World Making Annabel Jane Wharton,2022-01-14 From climate change forecasts and pandemic maps to Lego sets and Ancestry algorithms models encompass our world and our lives In her thought provoking new book Annabel Wharton begins with a definition drawn from the quantitative sciences and the philosophy of

science but holds that history and critical cultural theory are essential to a fuller understanding of modeling. Considering changes in the medical body model and the architectural model from the Middle Ages to the twenty first century, Wharton demonstrates the ways in which all models are historical and political. Examining how cadavers have been described, exhibited, and visually rendered, she highlights the historical dimension of the modified body and its depictions. Analyzing the varied reworkings of the Holy Sepulchre in Jerusalem, including by monumental commanderies of the Knights Templar, Alberti's Rucellai Tomb in Florence, Franciscan olive wood replicas, and video game renderings, she foregrounds the political force of architectural representations. And considering black boxes, instruments whose inputs we control and whose outputs we interpret but whose inner workings are beyond our comprehension, she surveys the threats posed by such opaque computational models, warning of the dangers that models pose when humans lose control of the means by which they are generated and understood. Engaging and wide ranging, *Models and World Making* conjures new ways of seeing and critically evaluating how we make and remake the world in which we live. **The Punched Card Annual**, 1954 **The Punched Card Machine Accounting and Data Processing Semi-annual, V. 1-**, 1952 *Circulatory, Digestive & Reproductive Systems: The Digestive System - From Stomach to Fuel* - Google Slides Gr. 5-8 Susan Lang, 2022-11-22 This is a Google Slides version of the *The Digestive System From Stomach to Fuel* chapter from the full lesson plan *Circulatory Digestive Reproductive Systems*. Our resource breaks down each system of the human body to make it easier to understand as a whole. Learn how we get energy from the food we eat and what happens to waste that our body cannot digest. All of our content is reproducible and aligned to your State Standards and are written to Bloom's Taxonomy. About GOOGLE SLIDES This resource is for Google Slides use. Google Slides is free with a Google email account. We recommend having Google Classroom in addition to Google Slides to optimize use of this resource. This will allow you to easily give assignments to students with a click of a button. This resource is comprised of interactive slides for students to complete activities right on their device. It is ideal for distance learning as teachers can share the resource remotely with their students, have them complete it, and return where the teacher can mark it from any location. What You Get: An entire Google Slides presentation with reading passages, comprehension questions, and drag and drop activities that students can edit and send back to the teacher. [Mathematical Models in the Biosciences II](#) Michael Frame, 2021-10-12 Volume Two of an award winning professor's introduction to essential concepts of calculus and mathematical modeling for students in the biosciences. This is the second of a two part series exploring essential concepts of calculus in the context of biological systems. Building on the essential ideas and theories of basic calculus taught in *Mathematical Models in the Biosciences I*, this book focuses on epidemiological models, mathematical foundations of virus and antiviral dynamics, ion channel models, and cardiac arrhythmias, vector calculus.

and applications and evolutionary models of disease It also develops differential equations and stochastic models of many biomedical processes as well as virus dynamics the Clancy Rudy model to determine the genetic basis of cardiac arrhythmias and a sketch of some systems biology Based on the author s calculus class at Yale the book makes concepts of calculus less abstract and more relatable for science majors and premedical students **Arctic Bibliography** Arctic Institute of North America,1954 Oxford Handbook of Cultural Evolution Jamshid Tehrani,Rachel L. Kendal,Jeremy Kendal,2025-07-16 This handbook offers a comprehensive overview of the interdisciplinary field of Cultural Evolution which has in recent years matured into an increasingly diverse and wide reaching but intellectually coherent research programme The book showcases the disciplinary spectrum of research into Cultural Evolution from primatology and medieval literature to gene culture co evolution computer science anthropology archaeology and experimental psychology The handbook consists of review essays contributed by leading experts in their areas structured into ten sections covering key approaches and debates major themes and real world applications Taken together the essays offer an exceptionally broad and forward looking perspective on the field for researchers across the cognitive and evolutionary social sciences including those working in fields adjacent to Cultural Evolution such as Behavioural Ecology Evolutionary Psychology and Digital Humanities The handbook also provides a unique educational resource for students and teachers seeking to integrate Cultural Evolution into undergraduate and postgraduate curricula as well as highlighting some of the potential applications of Cultural Evolution in fields such as education public health and environmental policy *God Gametes and The Planet of the Butterfly Queen* Robert Jameson,2010-02-08 The God Gametes theory is a refreshing look at what may be both the meaning of life and the reason for its creation It argues that life on earth and in fact our human consciousness are universal entities A model is presented that assumes our universe is a tiny part of a multiverse arguing that the multiverse is a hierarchical structure each level a reproductive system of intelligent living systems on the next higher level We take a fictional look at our parent species on that next higher level to find they are far more complex creatures than us but their universe is older and will soon run out of fuel to then die Parent species know that to preserve their life and the billions of years of heritage they created they must reproduce on a lower multiverse level This we believe is why humans have developed many features such as a large brain that make our survival on earth more difficult Yet these features have evolved because they are needed by the reproductive system of the parent species from lulu com Government Reports Announcements & Index ,1980
