A student is tracing the following algorithm. The function INT gives the integer part of any number, eg $\text{INT}(2.3) = 2$ and $\text{INT}(6.7) = 6$.

Line 10	Input A, B
Line 20	Let $C = \text{INT}(A \div B)$
Line 30	Let $D = B \times C$
Line 40	Let $E = A - D$
Line 50	If $E = 0$ then go to Line 90
Line 60	Let $A = B$
Line 70	Let $B = E$
Line 80	Go to Line 20
Line 90	Print B
Line 100	Stop

(a) Trace the algorithm when the input values are:

(i) $A = 36$ and $B = 16$; *(3 marks)*

(ii) $A = 11$ and $B = 7$. *(5 marks)*

(b) State the purpose of the algorithm. *(1 mark)*

Decision Analysis through Modeling and Game Theory William P. Fox, 2024-11-08 This unique book presents decision analysis in the context of mathematical modeling and game theory The author emphasizes and focuses on the model formulation and modeling building skills required for decision analysis as well as the technology to support the analysis The primary objective of Decision Analysis through Modeling and Game Theory is illustrative in nature It sets the tone through the introduction to mathematical modeling The text provides a process for formally thinking about the problem and illustrates many scenarios and illustrative examples These techniques and this approach center on the fact a decision makers at all levels must be exposed to the tools and techniques available to help them in the decision process b decision makers as well as analysts need to have and use technology to assist in the entire analysis process c the interpretation and explanation of the results are crucial to understanding the strengths and limitations of modeling and d the interpretation and use of sensitivity analysis is essential The book begins with a look at decision making methods including probability and statistics methods under risk of uncertainty It moves to linear programming and multi attribute decision making methods with a discussion of weighting methods Game theory is introduced through conflict games and zero sum or constant sum games Nash equilibriums are next followed by utility theory Evolutionary stable strategies lead to Nash arbitration and cooperation methods and N person methods presented for both total and partial conflict games Several real life examples and case studies using game theory are used throughout This book would be best used for a senior level course in mathematics operations research or graduate level courses or decision modeling courses offered in business schools The book will be of interest to departments offering mathematical modeling courses with any emphasis on modeling for decision making

Operations Research D S Hira, 1992 The author have used numerical examples as the means for presentation of the underlying ideas of different operations research techniques Accordingly a large number of comprehensive solved examples taken from a variety of fields have been added in every chapter and they are followed by a set of unsolved problems with answers and hints wherever required through which readers can test their understanding of the subject matter The book in its present form contains around 650 examples 1 280 illustrative diagrams Challenges and Solutions in Forecasting and Decision-Making in Marine Economy and Management Xuemei Li, Kevin Li, Junjie Wang, Song Ding, 2025-08-11 The marine economy and management pertain to the sustainable utilization of marine resources through internal and external coordination across departments with a focus on maximizing social and economic benefits However the persistence of activities such as overfishing offshore oil spills and excessive coastal development has led to escalating issues like offshore eutrophication ocean acidification warming and marine plastic pollution posing significant threats to marine sustainability In alignment with the United Nations Sustainable Development Goal 14 substantial progress has been achieved by ocean management researchers in analyzing fishery resource management optimization of marine industrial structures

development of marine energy and adaptation of marine climate change These studies hold crucial theoretical significance and practical value for understanding the state of the marine economy guiding management practices ensuring marine ecological security and fostering sustainable ocean development
