

People invented machines to make work easier.

Key Concept

Simple machines make work easier.

National Standard

People continue inventing new ways of doing things, solving problems, and getting work done.

In this unit, students learn that work is done by exerting a force over a distance. They see that simple machines make work easier, meaning that machines allow you to do work by using less force, but there is a trade-off. When you use less force to do work, you have to spread that force over a longer distance. Students will learn the following:

- ➔ an inclined plane decreases the amount of force but increases the distance needed to do work;
- ➔ the wedge and the screw change the direction of the force that is applied to them;
- ➔ a pulley changes the direction of the force applied to it, or changes the amount of force needed to do work; and
- ➔ a wheelbarrow is a compound machine made up of the lever and the wheel and axle.

Teacher Background

Machines are everywhere. From buses and cars to airplanes and ramps, from screws to wedges to wheelbarrows—we depend on machines to help us do our work.

All machines rely, in part, on the six simple machines: the inclined plane, the lever, the wedge, the wheel and axle, the pulley, and the screw. In fact, most machines are compound machines, which are combinations of simple machines.

Simple machines make it easier to do work by either changing the direction of force so that the force did the better work, or by multiplying the output of force. This latter effect is called mechanical advantage. Some simple machines change the direction of force, some provide mechanical advantage, and some do both.
