## Math Grade 1

### 1.OA.1

Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart and

comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. [See Table 1, page 94.](#)

#### Essential Understandings

- Real-world mathematical situations can be represented using objects, drawings, and equations.
- An unknown can be in any position of a mathematical situation.

#### Common Misconceptions

Many children misunderstand the meaning of the equal sign. The equal sign means "is the same as" but most primary students believe the equal sign tells you that the "answer is coming up" to the right of the equal sign. This misconception is over-generalized by only seeing examples of number sentences with an operation to the left of the equal sign and the answer on the right. First graders need to see equations written multiple ways, for example  $5 + 7 = 12$  and  $12 = 5 + 7$ . Students may believe that addition is always "put together" and subtraction is always "take away". By moving the unknown to a variety of positions, students will not be limited to this understanding. They will be able to solve for the change in numbers and the initial unknown.

#### Learning Targets

I can solve word problems using addition and subtraction within 20.  
I can solve four types of problems: add to, take from, put together/take apart, and compare with an unknown in any position.  
I can solve problems using objects, drawings, and equations.
