mechanism has been clearly demonstrated in the formation of multiple cell types during epidermis development in the shoot and root. Cell fate determination is influenced by both intrinsic factors i.e. developmental regulators as well as extrinsic signals i.e. environmental stimuli. By using model systems like stomata, trichome, root hair and shoot and root apical meristem cells, ligands, receptors and transcription factors have been found to regulate cell fate determination. However, the details of signaling cassettes responsible for cell fate determination remain largely unknown. Plants are made up of a large number of distinct cell types that originate from a single fertilized egg cell. How the diversity of cell types arise in appropriate places is one of the most fascinating and attractive research areas of plant biology. During the past several decades, due to the development of new molecular techniques and tools, advances in optical microscopy and availability of whole genome information and mutants in the model plant *Arabidopsis* and other plants, great advances have been made in understanding the mechanisms involved in cell fate determination in plants. This research topic contains 12 collected articles including 2 Opinion Articles, 5 Reviews, 4 Mini Reviews and 1 Original Research Article. Hopefully, these articles will expand our understanding of the regulation of cell fate determination in plants.

**The Political Economy of Natural Resources and Development** Paul A. Haslam, Pablo Heidrich, 2016-02-05. The Political Economy of Resources and Development offers a unique and multidisciplinary perspective on how the commodity boom of the mid 2000s reshaped the model of development throughout Latin America and elsewhere in the developing world. Governments increased taxes and royalties on the resource sector, the nationalization of foreign firms returned to the mainstream economic policy agenda, and public spending on social and developmental goals surged. These trends, often described as resource nationalism, have developed into a strategy for economic development, generated a re-imagining of the state and its institutional possibilities, and created a new but very significant political risk for extractive enterprises. However, these innovations, which constitute

the most dramatic change in development policy in Latin America since the advent of neoliberalism have so far received little attention from either academic or policy oriented publications This book explores the reasons behind these policies and their effects on states firms and development trajectories This text brings together renowned thematic experts to examine the political economic causes of resource nationalism as well as its manifestation in six Latin American countries The causal variables considered by the contributors to this collection include a range of political economic determinants of policy including commodity prices the influence of ideology and national politics ideas about industrial policy relations between host governments and investors and how countries respond to opportunities provided by regional initiatives and the new geography of the global economy This volume is essential reading in development economics political economy and Latin American studies as well as for those who want to understand what economic development means after neoliberalism
