**DAYSHEET 72: SOL Review Part I : Scientific Investigation**

11/11/2016

Ecosystems change over time. In some cases, changes result from natural events such as floods, forest fires, or volcanic eruptions. In other cases, changes to ecosystems are caused by human activities, such as cutting down forests or filling in wetlands to make land available for homes or farms. These events are called **disturbances**.

**Succession** is the process in which the communities in ecosystems are replaced by newer communities. Succession that occurs in an area where no communities already exist is called **primary succession**. Primary succession can take place on a newly formed volcanic island or in an area of bare rock exposed by a retreating glacier.

Primary succession takes place on bare land with no soil. The first species to live in the area are called **pioneer species**. These species must be very tough, with adaptations that help them survive the harsh conditions. Pioneer species are usually mosses or **lichens**.

Succession that takes place in an area where organisms previously lived is called **secondary succession**. This type of succession takes place after an existing ecosystem has been disturbed in some way, such as by a fire or flood. In secondary succession, there is already soil in place.

The final community that results from succession is called the **climax community**. The climax community is diverse, and stable. It will stay in place until another disturbance occurs.

1. Which of these would be most likely to grow on a small island that was formed by a volcanic eruption?  
A. climbing vines                      B. hardwood trees                      C. bushes                      D. lichens
2. Which term refers to the final stage of a forest's development?  
A. pioneer forest                      B. secondary forest                      C. climax forest                      D. conifer forest
3. Based on your reading, what type of succession follows when a farmland is abandoned?  
A. primary succession  
B. secondary succession
4. Based on your reading, what type of succession occurs on an area of bare rock?  
A. primary succession
