Anticoagulation Management Anne Rose, 2015-10-02 In addition to acting as a training guide for pharmacists, pharmacy residents and pharmacy students who seek to practice in areas associated with patients on anticoagulant therapy, the information presented within highlights the growing role of the pharmacist in these contexts. Readers will find useful information on anticoagulant management across all pharmacy practice areas including the inpatient, ambulatory, emergency services and transitions of care settings. Particular attention is given to summarizing best practices and providing real-world examples of ways in which pharmacists can be involved in anticoagulation management and the impact of such involvement. In the first major section of the book, each chapter focuses on the role of the pharmacist in the management of medication with a specific type of anticoagulant, e.g., warfarin, heparin, and target-specific oral agents in various healthcare settings. A broader overview of the clinical management of anticoagulation therapy is provided in the second major section, including descriptions of the role of pharmacists in assessing venous thromboembolism risk, ensuring patients receive appropriate prophylactic therapy and monitoring outcomes. Computerized Provider Order Entry Work Philip Smith, 2012-09-19 Despite all the jokes about the poor quality of physician handwriting, physician adoption of computerized provider order entry (CPOE) in hospitals still lags behind other industries' use of technology. As of the end of 2010, less than 22% of hospitals had deployed CPOE. Yet experts claim that this technology reduces over 80% of medication errors and could prevent an estimated 522,000 serious medication errors annually in the US. Even though the federal government has offered 20 billion dollars in incentives to hospitals and health systems through the 2009 stimulus, the ARRA HITECH section of the American Recovery and Reinvestment Act of 2009, many organizations are struggling to implement advanced clinical information systems including CPOE. In addition, industry experts estimate that the healthcare industry is lacking as many as 40,000 persons with expertise in clinical informatics necessary to make it all happen by the 2016 deadline for these incentives. While the scientific literature contains numerous studies and stories about CPOE, no one has written a comprehensive practical guide like *Making CPOE Work*. While early adopters of CPOE were mainly academic hospitals, community hospitals are now proceeding with CPOE projects and need a comprehensive guide. *Making CPOE Work* is a book that will provide a concise guide to help both new and experienced health informatics teams successfully plan and implement CPOE. The book, in a narrative style, draws on the author's decade-long experiences of implementing CPOE at a variety of academic, pediatric and community hospitals across the United States.

Transforming Mental Healthcare Sunil Khushalani, Antonio DePaolo, 2021-12-08 One in five U S adults experiences a mental illness within a given year With more than 550 000 people working to support this underserved community the mental healthcare system has grappled with inadequacies and

shortcomings in safety quality and care delivery There is a wide range of problems from access to care issues and errors to complications stemming from poor care Our country is also on an unsustainable path as our healthcare expenditure keeps growing To add to all of this we are facing a rampant epidemic of burnout among healthcare workers Modern advancements introduced with many promises such as electronic medical records newer medications or advanced treatments have created unique challenges when ushered into a highly regulated healthcare system What does it take to provide patients with everything they need the right quality of care at the right time and at the right cost to keep them healthy Which process steps add value Which steps are wasteful A widely accepted fact is that a conservative 30 50% of every step in the mental healthcare process does not help patients feel better or stay better When considering delays in care workarounds excessive documentation and an overuse of auditing the care system has moved highly skilled clinicians away from providing value as administrative tasks continue to encroach on their time There is a clear need to rethink and redesign the system of care This book is a primer for understanding the current state of the mental health system and the performance improvement skills and leadership acumen needed to address existing challenges Sheppard Pratt the award winning leading institution for mental healthcare in America provided the focus on mental healthcare and became the laboratory for this body of work over the course of eight years It hired a seasoned systems thinker with improvement expertise to work with mental health professionals and solve some of their most complex and chronic problems The book is a result of the collaboration between a practicing psychiatrist in a leadership role and the systems engineer Working together they demonstrate how to think about redesigning care and redefining the nature of work to enhance value for both the people served and the healthcare workforce They crafted a multi pronged approach towards culture change at Sheppard Pratt including implementing a course on Learning to Improve which introduced staff to a performance improvement methodology There are several vignettes interwoven throughout the book that describe the complexities and constraints of the system Solving some of these challenges creates a new paradigm of work while minimizing waste and enhancing value
