

Types of Beaks	Thin worms in Deep soil	Hard seeds and nuts found in trees/bushes	Soft seeds, nuts and flower buds
Sharp-beaked Finch (Twins) (Twins)	Best suited to finding worms which are deep in ground	Would be good to reach deep in a bush but not wide enough.	The sharp beaks would of damaged the soft seeds and flower buds.
Large broad beak (Wide bongs)	Difficult to collect and messy for the beaks	perfectly strong and wide to pick and eat large seeds.	Too wide and too strong to collect small seeds from the floor.
Small broad beak (spoons)	Too short to dig into the soil	Too small and weak to collect large nuts found in the trees.	A small but broad beak means small good scattered over a floor would be easy

The sharp-beaked finch

The sharp-beaked ground finch has evolved a beak which is small and sharp. This beak allows this finch to feed off the blood of other 'larger' birds such as masked boobies, red footed boobies and blue footed boobies. The sharp beaked finch will also jump on the back of other finches and suck their blood. This is unique amongst birds and the sharp-beaked ground finch is famed for these extraordinary feeding habits, so much so that it has also earned it the sinister pseudonym of the 'vampire finch'!

The large ground finch

The large ground finch evolved a large broad beak which it uses to feed on hard seeds and nuts. Woody nuts are its main food source. It forages either on the ground or in trees and bushes for its food. The islands where the large ground finch lives is abundant in plants that produce hard seeds and nuts.

The small ground finch

The small ground finch evolved a small broad beak which it uses to feed on soft seeds and nuts, although it is also known to eat flowers, buds, young leaves, and the occasional insect. Unlike the large ground finch its beak would not be strong enough to crack and eat hard nuts and seeds. It forages either on the ground or in low vegetation. The islands where the large ground finch lives is abundant in plants that produce soft seeds and nuts.

Graham,2016-05-06 Are Jane Austen and Charles Darwin the two great English empiricists of the nineteenth century Peter W Graham poses this question

as he brings these two icons of nineteenth century British culture into intellectual conversation in his provocative new book Graham shows that while the one is generally termed a naturalist Darwin's preferred term for himself and the other a novelist these characterizations are at least partially interchangeable as each author possessed skills that would serve well in either arena Both Austen and Darwin are naturalists who look with a sharp cold eye at the concrete particulars of the world around them Both are in certain senses novelists who weave densely particularized and convincingly grounded narratives that convey their personal observations and perceptions to wide readerships When taken seriously the words and works of Austen and Darwin encourage their readers to look closely at the social and natural worlds around them and form opinions based on individual judgment rather than on transmitted opinion Graham's four interlocked essays begin by situating Austen and Darwin in the English empirical tradition and focusing on the uncanny similarities in the two writers respective circumstances and preoccupations Both Austen and Darwin were fascinated by sibling relations Both were acute observers and analysts of courtship rituals Both understood constant change as the way of the world whether the microcosm under consideration is geological biological social or literary Both grasped the importance of scale in making observations Both discerned the connection between minute particular causes and vast general effects Employing the trenchant analytical talents associated with his subjects and informed by a wealth of historical and biographical detail and the best of recent work by historians of science Graham has given us a new entree into Austen's and Darwin's writings
