**A Practical Guide for Genetic Management of Fragmented Animal and Plant Populations** Richard Frankham,Jonathan D. Ballou,Katherine Ralls,Mark Derek Bruce Eldridge,Michele R. Dudash,Charles Barnet Fenster,Robert C. Lacy,Paul Sunnucks,2019 The habitats of most species have been fragmented by human actions isolating small populations that consequently develop genetic problems Millions of small isolated fragmented populations are likely suffering from inbreeding depression and loss of genetic diversity greatly increasing their risk of extinction Crossing between populations is required to reverse these effects but managers rarely do so A key reason for such inaction is that managers are often advised to manage populations in isolation whenever molecular genetic methods indicate genetic differences among them Following this advice will often doom small populations to extinction when the habitat fragmentation and genetic differences were caused by human activities A paradigm shift is required whereby evidence of genetic differentiation among populations is a trigger to ask whether any populations are suffering genetic problems and if so whether they can be rescued by augmenting gene flow Consequently there is now an urgent need for an authoritative practical guide to facilitate this paradigm shift in genetic management of fragmented populations

**Molecular Diagnostics in Cytopathology** Sinchita Roy-Chowdhuri, Paul A. VanderLaan, John M. Stewart, Gilda da Cunha Santos, 2018-11-21 Molecular diagnostics are increasingly used to help guide targeted therapy in solid organ tumors and hematologic malignancies A large proportion of molecular testing is performed on limited volume samples obtained via minimally invasive techniques such as fine needle aspiration Increasingly cytopathologists play an essential role in this process both in the triage of specimens during rapid on site evaluation and in the evaluation of archival samples to determine suitability for ancillary testing Therefore it is imperative that practicing cytopathologists stay abreast of up to date diagnostic prognostic and predictive ancillary tests that can be used on limited cytologic material This is a challenge since the landscape of known genomic alterations is constantly evolving and the subsequent set of testing options is ever expanding The proposed text will provide a user friendly quick reference handbook to serve as a useful resource for practicing pathologists and laboratory personnel dealing with and interested in this evolving field of molecular cytopathology

Essential

components to be presented include 1 pre analytic factors that affect sample selection and evaluation 2 specimen preparation to maximize confidence in results 3 interpretation of results 4 potential limitations and 5 workflow algorithms In addition specific disease specific molecular testing details will be outlined to provide the reader with resources for quick reference All chapters will be written by experts in their fields and will include the most up to date scientific and clinical information Molecular Diagnostics in Cytopathology will be of value to Cytopathologists Cytotechnologists Cytotechnology students Cytopathology fellows Surgical pathologists Pathology residents and fellows Molecular Pathologists Molecular pathology fellows Molecular technologists as well as Translational researchers with an interest in molecular cytopathology
