Kammen, 2015-04-24 In an era when pressing environmental problems make collaboration across the divide between sciences and arts and humanities essential this book presents the results of a collaborative analysis by an anthropologist and a physicist of four key junctures between science society and environment The first focuses on the systemic bias in science in favour of studying esoteric subjects as distinct from the mundane subjects of everyday life the second is a study of the fire climax grasslands of Southeast Asia especially those dominated by *Imperata cylindrica* sword grass the third reworks the idea of moral economy applying it to relations between environment and society and the fourth focuses on the evolution of the global discourse of the culpability and responsibility of climate change The volume concludes with the insights of an interdisciplinary perspective for the natural and social science of sustainability It argues that failures of conservation and development must be viewed systemically and that mundane topics are no less complex than the more esoteric subjects of science The book addresses a current blind spot within the academic research community to focusing attention on the seemingly common and mundane beliefs and practices that ultimately play the central role in the human interaction with the environment This book will benefit students and scholars from a number of different academic disciplines including conservation and environment studies development studies studies of global environmental change anthropology geography sociology politics and science and technology studies HIV / AIDS, Health and the Media in China Johanna Hood, 2011-01-25 HIV AIDS is an increasingly serious problem in China with an increasing number of new cases every year As a result HIV organizations have boomed with both state and non governmental organisations responding to the threat with campaigns to increase public awareness of the disease utilising the media as the primary tool to reshape citizens understandings and views of HIV AIDS This book explores how HIV AIDS is portrayed in China s media It argues that despite increasing education campaigns media coverage and social and academic openness towards HIV AIDS many Chinese of the majority Han ethnic group regard infection as a distant possibility believing themselves to be immune and infection a problem only for certain non Han ethnic groups with perceived lower moral standards in particular black Africans The book explores how HIV AIDS is reported analysing the language used in constructing and encoding the health narrative its subjects and ideas about the disease It demonstrates how China s media frequently employs negative events to present the

most extreme possibilities of poverty danger disasters and disease with black Africa portrayed as an antiquated distant and socioculturally and politically backward place uniquely unsuitable for the containment of disease in contrast with the progressive scientifically sophisticated and morally upstanding Chinese It argues that this discourse has had the effect of distancing many Chinese from the perceived possibility of infection thus compromising the effectiveness of public health campaigns on HIV AIDs It suggests that the key to combating the spread of the disease lies in challenging the racialised narratives through which the disease is portrayed in China s media rather than simply by aiming to educate greater numbers of people *AIDS in an Aging Society* Matilda White Riley, Marcia G.
