Landing Gear is designed to guide the reader through the key principles of landing system design and to provide additional references when available. Many problems which must be confronted have already been addressed by others in the past but the information is not known or shared leading to the observation that there are few new problems but many new people. The Design of Aircraft Landing Gear is intended to share much of the existing information and provide avenues for further exploration. The design of an aircraft and its associated systems including the landing system involves iterative loops as the impact of each modification to a system or component is evaluated against the whole. It is rare to find that the lightest possible landing gear represents the best solution for the aircraft; the lightest landing gear may require attachment structures which don't exist and which would require significant weight and compromise on the part of the airframe structure design. With those requirements and compromises in mind, The Design of Aircraft Landing Gear starts with the study of airfield compatibility, aircraft stability on the ground, the correct choice of tires followed by discussion of brakes, wheels and brake control systems. Various landing gear architectures are investigated together with the details of shock absorber designs. Retraction kinematics and mechanisms are studied as well as possible actuation approaches. Detailed information on the various hydraulic and electric services commonly found on aircraft and system elements such as dressings, lighting and steering are also reviewed. Detail design points the process of analysis and a review of the relevant requirements and regulations round out the book content. The Design of Aircraft Landing Gear is a landmark work in the industry and a must read for any engineer interested in updating specific skills and students preparing for an exciting career.

The Economist, 1978-10 Care and Repair of Advanced Composites Keith B Armstrong, William Cole, Eric Chesmar, Francois Museux, 2020-12-31

The new edition of the well known Care and Repair of Advanced Composites 3rd Edition improves on the usefulness of this practical guide geared towards the aerospace industry. Keith B Armstrong the original lead author of the first edition was still in charge of this project counting on the expert support of Eric Chesmar senior composites specialist at United Airlines. Mr Chesmar is also an active member of SAE International's CACRC Commercial Aircraft Composite Repair Committee an elite group of industry experts dedicated to the standardization, safety, security and efficiency of composite repairs in the airline industry. Mr Francois Museux Airbus and Mr William F Cole II also contributed. Care and Repair of Advanced Composites 3rd Edition presents a fully updated approach to the training syllabus recommended for repair design engineers and composite repair mechanics. Metal bonding has been included partly because the definition of composite can be interpreted to include metal skinned honeycomb panels and partly because some composite parts have metal fittings or reinforcements that must be treated before bonding. This third edition also covers a number of the problems experienced in service some of which may be applicable to metallic sandwich panels. Offers suggestions for design improvements including repair design as a particular topic and regulatory changes. Care and Repair of Advanced Composites 3rd Edition provides solid technical information and training for a wide range of airline staff.

Fibre Metal Laminates Ad Vlot, Jan Willem

Gunnink,2011-06-28 Fibre metal laminates were developed at Delft University of Technology in The Netherlands from the beginning of the 1980s This is a new family of hybrid materials consisting of thin metal layers bonded together by fibres embedded in an adhesive As a result of this build up fibre metal laminates possess a mixture of the characteristics of both metals and composite materials Initial development led to the Arall variant using aramid fibres which was first applied on the C 17 military transport aircraft around 1990 Large scale application became possible with a variant using glass fibres dubbed Glare which was selected for the Airbus A380 super jumbo in 2001 This is the first book to discuss these new materials and it deals mostly with Glare It covers most of the relevant aspects of the materials from static mechanical properties fatigue and impact to design production and maintenance of aircraft structures This book contains the basic information on these new materials necessary for engineers and aircraft operators alike
