Signaling in Host-Pathogen Interactions: The Host Point of View Diana Bahia, Abhay Satoskar, Olivier

Dussurget, 2018-03-23 The ability of pathogens such as parasites bacteria fungi and viruses to invade persist and adapt in both invertebrate and vertebrate hosts is multifactorial and depends on both pathogen and host fitness Communication between a pathogen and its host relies on a wide and dynamic array of molecular interactions Through this constant communication most pathogens evolved to be relatively benign whereas killing of its host by a pathogen represents a failure to adapt Pathogens are lethal to their host when their interaction has not been long enough for adaptation Evolution has selected conserved immune receptors that recognize signature patterns of pathogens as non self elements and initiate host innate responses aimed at eradicating infection Conversely pathogens evolved mechanisms to evade immune recognition and subvert cytokine secretion in order to survive replicate and cause disease The cell signaling machinery is a critical component of the immune system that relays information from the receptors to the nucleus where transcription of key immune genes is activated Host cells have developed signal transduction systems to maintain homeostasis with pathogens Most cellular processes and cell signaling pathways are tightly regulated by protein phosphorylation in which protein kinases are key protagonists Pathogens have developed multiple mechanisms to subvert important signal transduction pathways such as the mitogen activated protein kinase MAPK and the nuclear factor κ B NF κ B pathways Pathogens also secrete effectors that manipulate actin cytoskeleton and its regulators hijack cell cycle machinery and alter vesicular trafficking This research topic focuses on the cellular signaling mechanisms that are essential for host immunity and their subversion by pathogens

Quality of Horticultural Crops: A Recurrent/New Challenge for Plant Scientists in a Changing World Nadia Bertin, Michel Génard, Maarten Hertog, 2018-10-11 Besides increasing crop yield to feed the growing population improving crop quality is a challenging and key issue Indeed quality determines consumer acceptability and increases the attractivity of fresh and processed products In this respect fruit and vegetables which represent a main source of vitamins and other health compounds play a major role in human diet This is the case in developing countries where populations are prone to nutritional deficiencies but this is also a pending issue worldwide where the growing middle class is increasingly aware and in search of healthy food So a future challenge for the global horticultural industry will be to answer the demand for better quality food in a changing environment where many resources will be limited This e collection collates state of the art research on the quality of horticultural crops covering the underlying physiological processes the genetic and environmental controls during plant and organ development and the postharvest evolution of quality during storage and processing

Rhizosphere Functioning and Structural Development as Complex Interplay between Plants, Microorganisms and Soil Minerals Carsten W. Mueller, Andrea Carminati, Christina Kaiser, Jens-Arne Subke, Caroline Gutjahr, 2019-12-19 The rhizosphere the soil volume which is directly affected by root activity is an important hot spot for a multitude of biotic and abiotic processes Carbon transfer from plants to

microorganisms and to soil takes place in these small volumes around living roots creating chemical gradients and zones of microbial activity over distinct temporal and spatial scales Hydraulic and biogeochemical properties of the rhizosphere and the formation of complex three dimensional structures such as micro and macroaggregates in turn result from complex feedbacks between physical chemical and biological processes The aim of this Research Topic is to advance our understanding of rhizosphere interactions by collating 16 original contributions across disciplines including original research reviews and specific methods on the processes taking place in the rhizosphere to shed new light on one of the most important interfaces for the diversity of life on earth Molecular and Cellular Interactions Between the Host and Herpesviruses
