Conference on the title topic, the book examines issues related to the nature of water and its use and exploitation by society. Since ensuring an adequate water supply is becoming a critical issue in more and more countries, the conference brings together specialists from the social sciences and humanistic disciplines and the physical and natural sciences: biology, environmental sciences and health, to bridge gaps between the disciplines in addressing the problem. The international interdisciplinary nature of the conference participants makes it possible to arrive at equitable solutions to the many transnational issues relating to the rights of states which arise around water supply. The book discusses: The nature of water, Water as a human right, Water as the source of life, Water in a changing climate, Future water demands and adaptation strategies, Water resources contamination, Water resources management, Irrigation and desertification, Water sanitation and health, Transnational water rights, Legislation and controls, Lessons to be learnt, Water and disaster management. Healthy

and energy efficient buildings Sunil K. Sansaniwal, Roberto Alonso González-Lezcano, 2023-12-21. This Research Topic on Healthy and Energy Efficient Buildings focuses on the emerging need for sustainable and healthy indoor environments. The built environment contributes significantly to energy consumption and environmental degradation, leading to adverse effects on human health and well-being. Therefore, this Research Topic aims to bring together cutting edge research that addresses the complex interplay between building energy efficiency and occupant health. The scope of the Research Topic covers topics

such as energy efficiency indoor environmental quality sustainable energy health and well being building codes and standards energy management and green building practices The ultimate goal of the Research Topic is to promote sustainable building practices and enhance the well being of building occupants while reducing the environmental impact of buildings While energy efficiency has become a top priority in building design there has been less emphasis on creating indoor environments that are conducive to good health To achieve the goal of this Research Topic recent advances in building design construction and operation must be incorporated These include the use of advanced materials and technologies such as smart sensors and automation systems that can monitor and control indoor air quality temperature and lighting levels to create optimal indoor conditions for occupants Additionally the integration of renewable energy sources such as solar and wind power can help reduce the carbon footprint of buildings In order to promote healthy buildings there is a need for more research on the impact of building design and materials on indoor air quality and occupant health This includes exploring the use of natural ventilation and passive cooling strategies as well as the use of low emitting materials and finishes that do not off gas harmful chemicals This Research Topic seeks to address the need for sustainable buildings that prioritize both energy efficiency and occupant health

Visvanathan, Nidia S. Caetano, 2020-04-03 Alternative Energy Sources Andrzej L. Wasiak, 2021-05-20 The search for alternative sources of energy is an attempt to solve two of the main problems facing the modern world Today's resources are mainly based on fossil flammable substances such as coal oil and natural gas The first problem is related to the expected and observed depletion of deposits not only those available but also less accessible Another is related to global warming from emissions of greenhouse gases mainly carbon dioxide as well as emissions of other pollutants in the atmosphere Mitigating the harmful effects of fossil fuel use is an obvious challenge for mankind This Special Issue includes articles on the search for new raw materials and new technologies for obtaining energy such as those existing in nature methane hydrates biomass etc new more efficient technologies for generating electricity as well as analyses of the possibilities and conditions of use of these resources for practical applications

Methane Combustion over Lanthanum-based Perovskite Mixed Oxides Hamidreza Arandiyani, 2015-04-30 This book presents current research into the catalytic combustion of methane using perovskite type oxides ABO_3 Catalytic combustion has been developed as a method of promoting efficient combustion with minimum pollutant formation as compared to conventional catalytic combustion Recent theoretical and experimental studies have recommended that noble metals supported on ABO_3 with well ordered porous networks show promising redox properties Three dimensionally ordered macroporous 3DOM materials with interpenetrated and regular mesoporous systems have recently triggered enormous research activity due to their high surface areas large pore volumes uniform pore sizes low

cost environmental benignity and good chemical stability These are all highly relevant in terms of the utilization of natural gas in light of recent catalytic innovations and technological advances The book is of interest to all researchers active in utilization of natural gas with novel catalysts The research covered comes from the most important industries and research centers in the field The book serves not only as a text for researcher into catalytic combustion of methane 3DOM perovskite mixed oxide but also explores the field of green technologies by experts in academia and industry This book will appeal to those interested in research on the environmental impact of combustion materials and catalysis Climate and Ocean Dynamics at the Brazilian Margin - Past and Present Jacek Raddatz, Christoph Häggi, André Bahr, Cristiano M.
