3D Diagnosis and Treatment Planning in Orthodontics Jean-Marc Retrouvey, Mohamed-Nur Abdallah, 2021-03-13. This richly illustrated book is a wide-ranging guide to modern diagnostics and treatment planning in orthodontics which are mandatory prior to the initiation of any type of comprehensive treatment. The importance of three-dimensional 3D imaging techniques has been increasingly recognized owing to the shortcomings of conventional two-dimensional imaging in some patients such as those requiring complex adult treatment and those with temporomandibular joint dysfunctions or sleep disturbances. In the first part of this book, readers will find clear description and illustration of the diagnostic role of the latest 3D imaging techniques including cone beam computed tomography, intra-oral scanning and magnetic resonance imaging. The second part explains in detail the application of 3D techniques in treatment planning for orthodontic and orthognathic surgery. Guidance is also provided on the use of image fusion software for the purposes of accurate diagnosis and precise design of the most appropriate biomechanical approach in patients with malocclusions.

Smart Automotive Mobility Gerrit Meixner, 2020-09-16. This book focuses on smart results in the field of smart automotive mobility concentrating on semi-autonomous cars. The results are based on 5 recently finished public-funded research projects with a budget of over 15 million Euro. Providing insights into the next generation of personalized mobility on the road, the authors discuss personalized adaptive cooperative systems for highly automated cars and how they can be developed in a human-centered way. Furthermore, the book reports on a cooperative driver-vehicle interaction. How can the driver and the vehicle support each other? What are their best skills and how can they benefit from each other? It also gives novel insights on intuitive steering gestures on the steering wheel which initiate maneuvers to be executed by the automation and to be supervised by, influenced or interrupted by the driver. The book finishes with information on a cooperative laser beam system which improves the communication between the different road participants to optimize the road safety of tomorrow. Smart Automotive Mobility: Reliable Technology for the Mobile Human is an ideal source for researchers, students and practitioners working in the area of intelligent systems for the automotive industry. It gives valuable and condensed information from multi-million Euro research projects funded by the German Federal Ministry of Education and Research.
