illuminating the nature of our interdependence as individuals in society Expression theory as described by Scott is not merely a theory of art It is a theory of the ethics aesthetics psychology logic language and politics of expression It is a theory that enables us to examine in a more comprehensive way the question of whether there are any logical limits to the expressive capacity of language Expression theory is also a theory that enables us transcend the dialectics of the said and the unsaid the sayable and the unsayable It enables us to address the question of whether the communicability of a person s thoughts or feelings is determined solely by that person s communicative competence or whether there are some kinds of thoughts and feelings that are truly ineffable and incommunicable **The Oxford Handbook of Language Evolution** Maggie

distant ancestors come from and which routes did they travel around the globe as hunter gatherers in prehistoric times Genomics provides a fascinating insight into these questions and unlocks a mass of information carried by strands of DNA in each cell of the human body For Indigenous peoples scientific research of any kind evokes past and not forgotten suffering racial and racist taxonomy and finally dispossession Survival of human cell lines outside the body clashes with traditional beliefs as does the notion that DNA may tell a story different from their own creation story Extracting and analysing DNA is a new science barely a few decades old In the medical field it carries the promise of genetically adapted health care However if this is to be done genetic identity has to be defined first While a narrow genetic definition might be usable by medical science it does not do justice to Indigenous peoples cultural identity and raises the question of governmental benefits where their genetic identity is not strong enough People migrate and intermix and have always done so Genomics trace the genes but not the cultures Cultural survival or revival and Indigenous group cohesion are unrelated to DNA explaining why Indigenous leaders adamantly refuse genetic testing This book deals with the issues surrounding biomapping the Indigenous seen from the viewpoints of discourse analysts historians lawyers anthropologists sociologists museum curators health care specialists and Native researchers **Basics of the U.S. Health Care System** Nancy J.
