Architecture And Its Ethical Dilemmas:

Architecture and its Ethical Dilemmas Nicholas Ray, 2007-05-07 A cast of leading writers and practitioners tackle the ethical questions that architects are increasingly facing in their work from practical considerations in construction to the wider social context of buildings their appearance use and place in the narrative of the environment This book gives an account of these ethical questions from the perspectives of historical architectural practice philosophy and business and examines the implications of such dilemmas Taking the current discussion of ethics in architecture on to a new stage this volume provides an accumulation of diverse opinions focusing on architects actions and products that materially affect the lives of people in all urbanized societies **Ethics and the Practice of Architecture** Barry Wasserman, Patrick J. Sullivan, Gregory Palermo, 2000-03-07 From theory to practice a unique well rounded guide to ethics for today's architect How does an architect assist a community in evaluating alternative designs Resolve a dispute with a contractor Take into account a project's impact on the natural environment When it comes to questions like these making decisions about what ought to be done or what is the best or right solution requires more than sound technical knowledge and strong design talent It demands a solid understanding of the ethical issues that lie at the heart of architectural practice **Ethics and the Practice of Architecture** offers a complete broad based introduction to this crucial subject First it examines basic ethical theories and their application to architecture and discusses different ways of identifying ethical content in architecture Bridging the gap between theory and practice the second part of the book surveys different professional settings and building project processes that frequently hold ethical concerns and charts the ethical mandates that arise from them In the final section of the book thirty case studies explore a wide range of ethical dilemmas encountered in architectural practice with useful guidance on how to work through them effectively Arranged by topics that span the key phases of a project from pre design through post occupancy evaluation these case studies allow a detailed look at ethical concerns in real life situations where multiple issues are often at stake Providing a practical framework for the exploration of ethical issues in architecture today **Ethics and the Practice of Architecture** is an excellent resource for present and future architects in all areas of the field **The Ethical Architect** Tom Spector, 2001-06 In this book Tom Spector addresses the dilemmas of architectural practice and offers a theoretical and practical basis for an examination and transformation of the quandaries the profession now faces **The Ethical Architect** is a work of theory but refers to real buildings and real world problems Its conclusions provide a road map for architects to address the more than 100 000 decisions that go into the design of an average sized building **Ethics for Architects** Thomas Fisher, 2010-10-27 In this book the author presents fifty case studies representing a broad range of ethical dilemmas facing today's architects from questions regarding which clients to work for to the moral imperatives of reclaiming building materials for construction instead of sending them to landfills **The Ethical Architect** Tom Spector, 2012-04-17 Many believe that the moral mission of architecture has been in serious decline for the last 25 years In this important new book

Tom Spector points out the dilemmas of architectural practice and offers a theoretical and practical basis for an examination and transformation of the quandaries the profession now faces What makes a good building or a good architect Are there limits to an architect's ethical or legal responsibilities in a building process where architecture plays an increasingly smaller role Is preservation a moral imperative What happens when building codes and ethical responsibilities are in conflict In *The Ethical Architect* Spector investigates the moral underpinnings and implications of leading architectural theories subjecting them to the analytical techniques of moral philosophy His conclusions provide a road map to help architects make the right decision in the difficult tradeoffs that confront designers on a daily basis Spector estimates that more than 100 000 decisions go into the design of an average sized building *The Ethical Architect* is a work of theory but refers to real buildings and real world problems It is Spector's call to arms for his profession and a must read for practicing architects and students alike

Architecture, Ethics, and the Personhood of Place Gregory Caicco, 2007 Architecture and environmental design are among the last professional fields to develop a sustained and nuanced discussion concerning ethics Hemmed in by politics and powerful clients on one side and the often unscrupulous practices of the construction industry on the other environmental designers have been traditionally reluctant to address ethical issues head on And yet the rapid urbanization of the world's population continues to swell into new megacities each less healthy welcoming secure or environmentally sustainable than the next Green carbon reduced and sustainable building practices are important ways architects have recently responded to the symptoms of the crisis but are these efforts really addressing the core issues Taking the Dine Navajo Hogan Song a song used to protect and nourish the personhood of newly constructed dwellings as their inspiration the architects philosophers poets and other contemporary scholars contributing to this volume demonstrate that a deeper more radical change in our relationship to the built world needs to occur While offering a careful critique of modernist corporate or techno enthralled design practices these essays investigate an alternative relational ecology whose wisdom draws from ancient and often marginalized voices if not the whisperings of the earth itself Contributors include Richard Kearney Alberto Perez Gomez Juhani Pallasmaa Karsten Harries Edward Casey Susan Stewart David Abram Stacy Alaimo Jace and Laura Weaver Philip Sheldrake and Sebnem Yucel Young

Prospects for an Ethics of Architecture William M. Taylor, Michael P. Levine, 2012-12-06 Bringing together the reflections of an architectural theorist and a philosopher this book encourages philosophers and architects scholars and designers alike to reconsider what they do as well as what they can do in the face of challenging times It does so by exploring the notion that architecture and design can and possibly should in their own right make for a distinctive form of ethical investigation The book is less concerned with absolutist understandings of the two components of ethics a theory of the good and a theory of the right than with remaining open to multiple relations between ideas about the built environment design practices and the plurality of kinds of human subjects inhabitants individuals and communities accommodated by buildings and urban spaces The built environment contributes to the inculcation of all sorts of values good and bad Thus this book aims to change the way people commonly think about ethics not only in relation to the built environment but to themselves their ways of thinking and modes of behaviour

The Global Architect Donald McNeill, 2009-06-02 The Global Architect explores the increasing significance of globalization processes on urban change architectural practice and the built environment In what is primarily a critical sociological overview of the current global architectural industry Donald McNeill covers the star system of international architects who combine celebrity and hypermobility the top firms whose offices are currently undergoing a major global expansion and the role of advanced information technology in expanding the geographical scope of the industry

for ethical decision making helping architects navigate the intricate web of values and obligations that shape their work Delving into specific ethical issues the book explores topics such as sustainability historic preservation community engagement and social justice in architecture It challenges readers to think critically about the ethical implications of their design choices and the broader impact of their work on society and the environment With its comprehensive coverage of ethical theories practical case studies and insightful perspectives from leading architects this book serves as an invaluable resource for those seeking to navigate the ethical complexities of architecture It is a call to action for architects to embrace their ethical responsibilities and create a built environment that is not only aesthetically pleasing but also socially and environmentally responsible Whether you are an experienced architect an architecture student or simply someone with a passion for the built environment this book will challenge your thinking and inspire you to consider the ethical dimensions of architecture in a new light It is an essential guide for anyone who believes that architecture has the power to shape a better world If you like this book write a review

Diversity among Architects Craig Wilkins, 2016-03-10 Diversity among Architects presents a series of essays questioning the homogeneity of architecture practitioners who remain overwhelmingly male and Caucasian to help you create a field more representative of the population you serve The book is the collected work of author Craig L Wilkins an African American scholar and practitioner and discusses music education urban geography social justice community design centers race space identity shared landscape and many more topics

Resilience by Design Alexandra Jayeun Lee, 2016-02-24 This book discusses that disasters whether natural or man made are essentially a human phenomenon When a city becomes gridlocked and its resources depleted the collective resilience of those who remain on the ground becomes critical to its immediate survival and recovery The author argues that in order to build resilient futures for our urban environment we need more than the skills of architects engineers and planners Support of local communities and policymakers is also needed The book revisits the recent catastrophic events the earthquakes in Port au Prince and Christchurch and the hurricane in New Orleans and places emphasis on the social cultural and political processes of rebuilding houses facilities and infrastructure that often go unnoticed Understanding the wider context for how a built project comes to be the author argues is a solid indicator of its longevity than by the measure of its material characteristics alone and gives us reasons to question the validity of our intentions as designers of the future This book provides strategies for thinking about assessing and developing ways for place makers from all disciplines to become responsible citizen designers of our cities

Ethics for Architects Thomas Fisher, 2012-03-20 In this new Architecture Brief Ethics for Architects Thomas Fisher presents fifty case studies representing a broad range of ethical dilemmas facing today's architects from questions regarding which clients to work for to the moral imperatives of reclaiming building materials for construction instead of sending them to landfills This timely book features newly relevant interpretations adapted to the pervasive demands of globalization sustainability and developments in information technology Fisher's analysis of architecture's

thorniest ethical issues are written in a style that is accessible to the amateur philosopher and appealing to professional architects and students alike Thought provoking and essential Ethics for Architects is required reading for any designer who wants to work responsibly in today's complex world

Architectural Research Addressing Societal Challenges Manuel Jorge Rodrigues Couceiro da Costa, Filipa Roseta, Joana Pestana Lages, Susana Couceiro da Costa, 2019-08-08 The escalating interdependency of nations drives global geopolitics to shift ever more quickly Societies seem unable to control any change that affects their cities whether positively or negatively Challenges are global but solutions need to be implemented locally How can architectural research contribute to the future of our changing society How has it contributed in the past The theme of the 10th EAAE ARCC International Conference Architectural Research Addressing Societal Challenges was set to address these questions This book Architectural Research Addressing Societal Challenges includes reviewed papers presented in June 2016 at the 10th EAAE ARCC International Conference which was held at the facilities of the Faculty of Architecture of the University of Lisbon The papers have been further divided into the following five sub themes a Changing Society In Transit Global Migration Renaturalization of the City Emerging Fields of Architectural Practice and Research on Architectural Education The EAAE ARCC International Conference held under the aegis of the EAAE and of the ARCC is a conference organized every other year in collaboration with one of the member schools universities of those associations alternatively in North America or in Europe

Philosophy of Technology and Engineering Sciences, 2009-11-27 The Handbook Philosophy of Technology and Engineering Sciences addresses numerous issues in the emerging field of the philosophy of those sciences that are involved in the technological process of designing developing and making of new technical artifacts and systems These issues include the nature of design of technological knowledge and of technical artifacts as well as the toolbox of engineers Most of these have thus far not been analyzed in general philosophy of science which has traditionally but inadequately regarded technology as mere applied science and focused on physics biology mathematics and the social sciences First comprehensive philosophical handbook on technology and the engineering sciences Unparalleled in scope including explorative articles In depth discussion of technical artifacts and their ontology Provides extensive analysis of the nature of engineering design Focuses in detail on the role of models in technology

Architectural Research Addressing Societal Challenges Volume 2 Manuel Jorge Rodrigues Couceiro da Costa, Filipa Roseta, Susana Couceiro da Costa, Joana Pestana Lages, 2017-09-19 The EAAE ARCC International Conference held under the aegis of the EAAE European Association for Architectural Education and of the ARCC Architectural Research Centers Consortium is a conference organized every other year in collaboration with one of the member schools universities of those associations alternatively in North America or in Europe The EAAE ARCC Conferences began at the North Carolina State University College of Design Raleigh with a conference on Research in Design Education 1998 followed by conferences in Paris 2000 Montreal 2002 Dublin 2004 Philadelphia 2006 Copenhagen 2008 Washington 2010 Milan 2012 and Honolulu

2014 The conference discussions focus on research experiences in the field of architecture and architectural education providing a critical forum for the dissemination and engagement of current ideas from around the world **Wealth and the Built Environment** Emilio José García, Brenda Vale, 2025-04-26 The need to address global environmental problems is urgent The United Nations 17 Sustainable Development Goals SDGs cover a wide range of global concerns from poverty hunger and gender equity to justice and climate action Concerningly the SDGs still have faith in economic growth and technological innovation as the means of fixing all global concerns including climate change What is not questioned is whether solving development and sustainability problems through economic growth for the accumulation of wealth for the few has led to many of the current unequal development and environmental problems If unfair growth and wealth accumulation have been part of the problem how can they be part of the solution The problem with the SDGs is that their fulfilment relies on wealth creation without the fundamental concomitant of wealth redistribution The one common driver of change affecting both sustainability and development that has not been included in the SDGs is wealth the central focus of this book SDG 11 sustainable cities and communities presents a further paradox unless the issue of wealth and its fair distribution is grasped Cities are the places where wealth is generated but are also places where only a minority are wealthy The wealth generated in cities leads to higher consumption of resources higher emissions and higher disparities and inequalities However any version of a sustainable future will happen in the built environment made according to current ideals like the present belief in overcoming all humanity's problems by becoming wealthier A fundamental assumption of this book is that the first step toward a fairer habitat that can be maintained with the resources available is only possible if we stop designing cities and buildings as if everyone were wealthy or had to become wealthy To achieve this goal it is essential to identify and raise awareness of the impact of wealth to question how the myths about the advantages of wealth were built where they come from what shape they take in the built environment and who benefits from them
