**Biomimetic Architecture and Its Role in Developing Sustainable, Regenerative, and Livable Cities** Mohsen Aboulnaga, Samaa E. Helmy, 2022-09-01 This book focuses on understanding biomimetic architecture and its role as a sustainable design tool. It presents the role of biomimicry in mitigation and adaptation to climate change and examines how biomimetic architecture can provide healthy solutions to limit the spread of COVID 19 in buildings and cities. Coverage includes global examples of biomimetic approaches and buildings, an evaluation of the performance of biomimicry applications in architecture to illustrate best practices, and an exploration of how nature can offer inspiration in building design to conserve resources and save energy use as well as curb carbon emissions, a reaffirmed goal of COP 26 and an outcome of Glasgow Climate Pact. Finally, the book presents guidelines to enhance urban areas and healthier spaces in buildings to meet COVID 19 social distance regulations and beyond. Examines global applications of biomimicry in architecture. Highlights the importance of biomimicry in driving livability in cities and buildings. Explores the role of biomimetic architecture in mitigating climate change. The line of argument developed is highly relevant to the present in addition to being original and pertinent to research on urban regeneration, especially in regard to the exploration of the use of biomimicry architecture in response to changing urban demands. Alessandra Battisti, Ph.D., Professor of Architecture, University of Rome La Sapienza

**how architecture can save the world from global climate change** Tommy Vince, 2021-12-09 Is finding your house sinking into the ground the next big thing within sustainable architecture? Well, if you find the arguments of this project strong enough, it might actually be a common sight in the near future. The field of architecture needs to respond to the IPCC's call for action for methods of CO<sub>2</sub> sequestration to help antagonize the developing global climate change. How architecture can save the world from global climate change is a bold project that responds to that call, proposing an architecture that both sequesters its embodied CO<sub>2</sub> mass and does so within a targeted time frame of a generation. Ultimately, gifting society and its protagonists with a possibility of producing a truthfully net positive CO<sub>2</sub> reductive footprint. It succeeds in doing so by drawing knowledge from a local history of sinking Nordic timber log architecture and combining it with the theory of sequestration. Performed as projected, this pioneering project might just be the world's most sustainable architecture ever designed. How architecture can save the world from global climate change is for anyone with an architectural fascination longing for a deeply illustrated and detailed read of sustainable architecture and Nordic timber log design. In a comprehensive way, it weaves architectural poetry together with hard data, science, construction details, and ideological ambitions in a convincing argument for the benefit of society's bettered relationship to climate. In conclusion, this book is more than just a coffee book; it's a blend of a scientific report and a piece of art, challenging the basic perception of what an architectural book can be. An intensely original and highly provocative MA Thesis executed with care, supported by an amazing body of research with attention to detail and scientific accuracy. A mythic

construction full of poetic notions that allows others to rethink change Amalia Katapodis University Lecturer UMA

Wissensmanagement WM kann dies eine erhebliche finanzielle Schädigung und ein Verlust von Wettbewerbsvorteilen für das UN bedeuten. Um solche kritischen Situationen zu vermeiden, müssen Mitarbeiter motiviert werden, ihr Wissen zu teilen. Eine Möglichkeit dazu bieten Wissensmanagementsysteme WMS. Bis Ende der 90er Jahre war der Mehrwert von WMS nicht ausreichend untersucht und dementsprechend auch nicht bekannt. Allerdings avancierten WMS zu einer festen technischen Institution in UN. Wird die Motivation der Mitarbeiter durch WMS richtig gefördert, steigert das den individuellen Beitrag von Wissen. Aus diesem Grund stellt sich die Frage, wie WMS gestaltet werden müssen, um Mitarbeiter dazu zu motivieren, ihr Wissen zu teilen.

*Alvar Aalto and Urban Design* Robert Cody, Angela Amoia, 2025-10-24. This book provides a fresh look at Alvar Aalto's regional and community planning work, particularly the ways in which he incorporated sustainability, resiliency, energy, and health, and examines how contemporary architects and planners can learn from this approach for the betterment of 21st century urban design and our future cities. The Alvar Aalto Atelier planned and promoted regional development that combined ecological features, considered density, and offered a framework for informality, including flexible, adaptable infrastructures with physical plans integrating communities with nature. These plans were largely suburban and contained vital lessons on how to deal with sprawl, traffic, landscape, energy, labor, and industry. This book analyzes letters, writings, and drawings not seen outside the Alvar Aalto Foundation to review alternative ways to examine suburban landscapes and urban typologies through sustainability, ecology, and use of digital technologies. This is an essential read for all those interested in the urban design work of Alvar Aalto. Written in an accessible way for those new to the work of Aalto. Architecture and Urban Design students of all levels will also find this a helpful guide on ecologically and socially responsible design.
