Art And Illusion A Study In The Psychology Of Pictorial Representation V 6:

Art and Illusion E. H. Gombrich, 2023-10-17 A groundbreaking account of perception and art from one of the twentieth century's most important art historians E H Gombrich is widely considered to be one of the most influential art historians of the twentieth century and *Art and Illusion* is generally agreed to be his most important book Bridging science and the humanities this classic work examines the history and psychology of pictorial representation in light of modern theories of information and learning in visual perception Searching for a rational explanation of the changing styles of art Gombrich reexamines ideas about the imitation of nature and the function of tradition In testing his arguments he ranges over the history of art from the ancient Greeks Leonardo and Rembrandt to the impressionists and the cubists But the triumphant originality of *Art and Illusion* is that Gombrich is less concerned with the artists than with the psychological experience of the viewers of their work Please note All images in this ebook are presented in black and white and have been reduced in size

Plain Text Dennis Tenen, 2017-06-20 This book challenges the ways we read write store and retrieve information in the digital age Computers from electronic books to smart phones play an active role in our social lives Our technological choices

thus entail theoretical and political commitments Dennis Tenen takes up today's strange enmeshing of humans, texts, and machines to argue that our most ingrained intuitions about texts are profoundly alienated from the physical contexts of their intellectual production. Drawing on a range of primary sources from both literary theory and software engineering, he makes a case for a more transparent practice of human-computer interaction. Plain Text is thus a rallying call, a frame of mind as much as a file format. It reminds us ultimately that our devices also encode specific modes of governance and control that must remain available to interpretation.

Inner Experiences: Theory, Measurement, Frequency, Content, and Functions
Alain Morin, Thomas M. Brinthaup, Jason D. Runyan, 2016-02-26

One fundamental topic of scientific inquiry in psychology is the study of what William James called the stream of consciousness: our ongoing experience of the world and ourselves from within our inner experiences. These internal states, aka stimulus-independent thoughts, include inner speech, mental imagery, feelings, sensory awareness, internally produced sounds or music, unsymbolized thinking, and mentalizing (thinking about others' mental states). They may occur automatically during mind-wandering, daydreaming, and resting-state episodes and may focus on one's past, present, or future (mental time travel), e.g., autobiographical consciousness. Inner experiences also may take the form of intrusive or ruminative thoughts. The types, characteristics, frequency, content, and functions of inner experiences have been studied using a variety of traditional methods, among which questionnaires, thought-listing procedures, i.e., open-ended self-reports, thinking-aloud techniques, and daily diaries. Another approach, articulatory suppression, consists in blocking participants' use of verbal thinking while completing a given task; deficits indicate that inner speech plays a causal role in normal task completion. Various thought-sampling approaches have also been developed in an effort to gather more ecologically valid data. Previous thought-sampling studies have relied on beepers that signal participants to report aspects of their inner experiences at random intervals. More recent studies are exploiting smartphone technology to easily and reliably probe randomly occurring inner experiences in large samples of participants. These various measures have allowed researchers to learn some fundamental facts about inner experiences. To illustrate, it is becoming increasingly clear that prospective, future-oriented thinking greatly depends on access to autobiographical memory; past-oriented thinking, where recollection of past scenes is used as a template to formulate plausible future scenarios. The main goal of the present Research Topic was to offer a scientific platform for the dissemination of current high-quality research pertaining to inner experiences. Although data on all forms of inner experiences were welcome, reports on recent advances in inner speech research were particularly encouraged. Here are some examples of topics of interest: 1) description and validation of new scales/inventories/questionnaires measuring any form of inner experience; 2) novel uses or improvements of existing measures of inner experiences; 3) development of new smartphone technology facilitating or broadening the use of cell phones to sample inner experiences; 4) frequency, content, and functions of various inner experiences; 5) correlations between personality or cognitive variables and any aspects of inner experiences; 6) philosophical or theoretical considerations pertaining to inner

experiences and 7 inner experience changes with age
