

CHAPTER 18**SKILLS LAB***Drawing Conclusions*

As the Stomach Churns

The proteins you eat are constructed of large, complex molecules. Your body begins to break down these complex molecules in the stomach. In this lab, you will draw conclusions about the process by which proteins are digested.

• Problem

What conditions are needed for the digestion of proteins in the stomach?

• Materials

test tube rack	marking pencil
pepsin	dilute hydrochloric acid
water	plastic stirrers
litmus paper	
cubes of boiled egg white	
10-mL plastic graduated cylinder	
4 test tubes with stoppers	

• Procedure

Review the safety guidelines in Appendix A.

1. In this lab, you will investigate how acidic conditions affect protein digestion. Read over the entire lab to see what materials you will be testing. Write a prediction stating which conditions you think will speed up protein digestion.
2. Label four test tubes A, B, C, and D and place them in a test tube rack.
3. In this lab, the protein you will test is boiled egg white, which has been cut into cubes about 1 cm on each side. Add 3 cubes to each test tube. Note and record the size and overall appearance of the cubes in each test tube. **CAUTION:** Do not put any egg white into your mouth.
