Char,Keith O. Geddes,Gaston H. Gonnet,Benton L. Leong,Michael B. Monagan,Stephen M. Watt,2012-12-06 The design and implementation of the Maple system is an on going project of the Symbolic Com putation Group at the University of Waterloo in Ontario Canada This manual corresponds with version V roman numeral five of the Maple system The on line help subsystem can be invoked from within a Maple session to view documentation on specific topics In particular the command updates points the user to documentation updates for each new version of Maple The Maple project was first conceived in the autumn of 1980 growing out of discussions on the state of symbolic computation at the University of Waterloo The authors wish to acknowledge many fruitful discussions with colleagues at the University of Waterloo particularly Morven Gen tleman Michael Malcolm and Frank Tompa It was recognized in these discussions that none of the locally available systems for symbolic computation provided the facilities that should be expected for symbolic computation in modern computing environments We concluded that since the basic design decisions for the then current symbolic systems

such as ALTRAN CAMAL REDUCE and to design a new system MACSYMA were based on 1960 s computing technology it would be wise from scratch taking advantage of the software engineering technology which had become available since then as well as drawing from the lessons of experience Maple s basic features e g elementary data structures input output arithmetic with numbers and elementary simplification are coded in a systems programming language for efficiency

*The Future Was Here* Jimmy Maher,2018-01-26 Exploring the often overlooked history and technological innovations of the world s first true multimedia computer Long ago in 1985 personal computers came in two general categories the friendly childish game machine used for fun exemplified by Atari and Commodore products and the boring beige adult box used for business exemplified by products from IBM The game machines became fascinating technical and artistic platforms that were of limited real world utility The IBM products were all utility with little emphasis on aesthetics and no emphasis on fun Into this bifurcated computing environment came the Commodore Amiga 1000 This personal computer featured a palette of 4 096 colors unprecedented animation capabilities four channel stereo sound the capacity to run multiple applications simultaneously a graphical user interface and powerful processing potential It was Jimmy Maher writes in *The Future Was Here* the world s first true multimedia personal computer Maher argues that the Amiga s capacity to store and display color photographs manipulate video giving amateurs access to professional tools and use recordings of real world sound were the seeds of the digital media future digital cameras Photoshop MP3 players and even YouTube Flickr and the blogosphere He examines different facets of the platform from Deluxe Paint to AmigaOS to Cinemaware in each chapter creating a portrait of the platform and the communities of practice that surrounded it Of course Maher acknowledges the Amiga was not perfect the DOS component of the operating systems was clunky and ill matched for example and crashes often accompanied multitasking attempts And Commodore went bankrupt in 1994 But for a few years the Amiga s technical qualities were harnessed by engineers programmers artists and others to push back boundaries and transform the culture of computing
