Atlas Of Arthropod Sensory Receptors Dynamic Morphology In Relation To Function:

Atlas of Arthropod Sensory Receptors Eisuke Eguchi, Yoshiha Tominaga, 1999-02 The great variety in structure and function of arthropod sensory organs is due to the huge number of species living in spatially and temporally different environments and to great variation in behavioral patterns This atlas compiles the electron microscopic anatomy of arthropod sensory organophotoreceptors chemoreceptors and others in relation to function behavior and environment The authors show how each sensory receptor is finely tuned to detect the necessary information in the arthropods surroundings and how the sensory receptors dynamically change their fine structures according to their functional and adaptational states In each two page spread of the book electron or light micrographs are shown on the right with diagrammatic illustrations and accompanying text on the left in a format that is attractive and easy to understand The atlas thus provides an important bridge between the physiology and morphology of arthropod sensory receptors Treatise on Zoology - Anatomy,

Taxonomy, Biology. The Myriapoda, Volume 2 Alessandro Minelli, 2015-09-29 Myriapods are the only major zoological group for which a modern encyclopedic treatment has never been produced In particular this was the single major gap in the largest zoological treatise of the XIX century Grass s Trait de Zoologie whose publication has recently been stopped The two volumes of The Myriapoda fill that gap with an updated treatment in the English language Volume II deals with the Diplopoda or millipedes As in the previous volume the treatment is articulated in chapters dealing with external and internal morphology physiology reproduction development distribution ecology phylogeny and taxonomy All currently recognized suprageneric taxa and a very large selection of the genera are considered All groups and features are extensively illustrated by line drawings and micrographs and living specimens of representative species of the main groups are presented in color photographs

Function and Regulation of Chemoreceptors Dieter Wicher, Frédéric Marion-Poll, 2019-02-08 To perceive environmental chemical compounds and to convert these external signals into an intracellular message might be the oldest way for a living being to get information from the outside world Chemoreceptors are proteins or protein complexes that detect molecules from the outside world either at distance olfaction or at close range gustation Chemoreceptors can operate as ionotropic or as metabotropic receptors Ionotropic receptors form ion channels that are activated via ligand binding Activation of a metabotropic receptor initiates an intracellular signaling cascade that could include a change of enzymatic activity production of second messenger or activation of ion channels The receptor performance has to be fine tuned according to the actual physiological requirements and the presentation of the chemical signal This Research Topic collects reports and reviews on structure and function of chemoreceptors in the animal kingdom and how these receptors are regulated **Treatise on Zoology - Anatomy, Taxonomy, Biology. The Myriapoda** Alessandro Minelli, 2011-03-21 The Myriapoda is the first comprehensive monograph ever on all aspects of myriapod biology including external and internal morphology physiology reproduction development distribution ecology phylogeny and taxonomy It is thus of major interest

for all zoologists and soil biologists *The Neurobiology of Olfaction* Anna Menini, 2009-11-24 Comprehensive Overview of Advances in Olfaction The common belief is that human smell perception is much reduced compared with other mammals so that whatever abilities are uncovered and investigated in animal research would have little significance for humans However new evidence from a variety of sources indicates this traditional view is likely Treatise on Zoology - Anatomy, Taxonomy, Biology. The Myriapoda, Volume 1 Alessandro Minelli, 2011-03-21 Myriapods are the only major zoological group for which a modern encyclopedic treatment has never been produced In particular this was the single major gap in the largest zoological treatise of the XIX century Grass s *Trait de Zoologie* whose publication has recently been stopped The two volumes of The Myriapoda fill that gap with an updated treatment in the English language Volume I opens with an introductory treatment of myriapod affinities and phylogeny The following chapters are mostly devoted to the Chilopoda or centipedes extensively treated from the point of view of external and internal morphology physiology reproduction development distribution ecology phylogeny and taxonomy All currently recognized suprageneric and generic taxa are considered Additional chapters deal with the two smaller myriapod classes the Symphyla and the Pauropoda All groups and features are extensively illustrated by line drawings and micrographs and living specimens of representative species of the main groups are presented in color photographs *Insect Ecomorphology* Oliver Betz, 2025-02-25 *Insect Ecomorphology Linking Functional Insect Morphology to Ecology and Evolution* offers the most up to date knowledge and understanding of the morphology of insects and the functional basis of their diversity This book covers the form and function of insect body structures synthesized with their physiological performance capabilities biological roles and evolutionary histories Written by international experts this book provides a modern outline of the topic exploring the ecomorphology of functional systems such as insect feeding locomotion sensing and reproduction The combination of conceptual and review chapters methodological approaches and case studies enables readers to delve into active research fields and attain a general idea of the explanatory power of the form function performance paradigm The book uncovers key structures of the different regions of the insect body elucidates how they function and investigates their ecological and evolutionary implications *Insect Ecomorphology Linking Functional Insect Morphology to Ecology and Evolution* is a vital resource for entomologists biologists and zoologists especially those seeking to better understand the morphology and physiological impacts tying insects to environments and evolution Integrates traditionally separate fields of research with the aim of understanding insect morphology ecology and evolution Considers the impacts of insect ecomorphology on biomimetic applications Includes conceptual and methodological chapters to help readers appreciate the ways in which ecomorphological studies are performed Evolutionary Biomechanics of Sound Production and Reception Carl Soulsbury, Fernando Montealegre-Z, Damian Octavio Elias, 2022-01-20 **Visual Ecology** Thomas W. Cronin, Sönke Johnsen, Justin Marshall, Eric J. Warrant, 2014-08-10 A comprehensive treatment of visual ecology Visual ecology is the study of how animals use visual systems to meet their ecological needs how these systems have evolved

and how they are specialized for particular visual tasks Visual Ecology provides the first up to date synthesis of the field to appear in more than three decades Featuring some 225 illustrations including more than 140 in color spread throughout the text this comprehensive and accessible book begins by discussing the basic properties of light and the optical environment It then looks at how photoreceptors intercept light and convert it to usable biological signals how the pigments and cells of vision vary among animals and how the properties of these components affect a given receptor s sensitivity to light The book goes on to examine how eyes and photoreceptors become specialized for an array of visual tasks such as navigation evading prey mate choice and communication A timely and much needed resource for students and researchers alike Visual Ecology also includes a glossary and a wealth of examples drawn from the full diversity of visual systems The most up to date overview of visual ecology available Features some 225 illustrations including more than 140 in color spread throughout the text Guides readers from the basic physics of light to the role of visual systems in animal behavior Includes a glossary and a wealth of real world examples
