Time-of-Flight Mass Spectrometry and its Applications E.W. Schlag, 2012-12-02 The resurgence of time of flight mass spectrometry TOF MS has had its origin in the simplicity of construction and application of such instruments together with the high transmission and the great increase in resolution that has been achieved The instrument lends itself naturally to a coupling with pulsed

laser sources though this is not a prerequisite It also affords a time resolution far beyond that traditionally achieved with mass spectrometric rapid scan techniques a recent example being the real time analysis of a multi component mixture from an automobile exhaust Furthermore the mass range appears to be extremely large mass up to 500 kDa and beyond what is being readily measured in the laboratory today The present set of contributions attempts to give a survey of current applications from many of the active groups in the field A variety of new applications are considered which are no doubt just the beginning of large new areas of application By presenting this work in book form it is hoped that it will be of help to the many groups intending to initiate work in this rapidly expanding new area of mass spectrometry

Analysis of Environmental Radionuclides Pavel P. Povinec, 2011-07-28 The purpose of this book is to present a state of art summary of current knowledge of methods of assessment of radionuclides in the terrestrial and marine environments It cover the traditional methods of radioactivity measurements such as radiometrics techniques but also recent developments in the mass spectrometry sector The book starts with a short preface introducing the subject of the book summarising content and philosophy of the book as well as the most important historical achievements The scientific topics are introduced by description of sampling methods optimisation of sampling sites and sampling frequency The recent developments in radiochemical separation methods using chromatography resins for the treatment of actinides transuranics and other groups of radioelements are also described No other book is available covering all aspects of environmental radioactivity measurements although remarkable progress has been made in detection techniques over the last ten years At present the new methods enable to carry out investigations which were not possible before either because of lack of sensitivity or because of the fact that they required too large samples
