Gender, Judging and the Courts in Africa J. Jarpa Dawuni, 2021-11-29 Women judges are playing increasingly prominent roles in many African judiciaries yet there remains very little comparative research on the subject Drawing on extensive cross national data and theoretical and empirical analysis this book provides a timely and broad ranging assessment of gender and judging in African judiciaries Employing different theoretical approaches the book investigates how women have fared within domestic African judiciaries as both actors and litigants It explores how women negotiate multiple hierarchies to access the judiciary and how gender related issues are handled in courts The chapters in the book provide policy theoretical and practical prescriptions to the challenges identified and offer recommendations for the future directions of gender and judging in the post COVID 19 era including the role of technology artificial intelligence social media and institutional transformations that can help promote women s rights Bringing together specific cases from Kenya Uganda Ghana Nigeria Zambia Tanzania and South Africa and regional bodies such as ECOWAS and the African Commission on Human and Peoples Rights and covering a broad range of thematic reflections this book will be of interest to scholars students and practitioners of African law judicial politics judicial training and gender studies It will also be useful to bilateral and multilateral donor institutions financing gender sensitive judicial reform programs particularly in Africa The Open Access version of this book available at www.taylorfrancis.com/books/oa/edit/10.4324/9780429327865/gender-judging-courts-africa-jarpa-dawuni has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Children's Exercise Physiology Filipe Manuel Clemente, Luca Paolo Ardigo, Wook Song, Matthieu E. M. Lenoir, Luis Paulo Rodrigues, Hermundur Sigmundsson, 2020-06-22

A Physiologically-Based Approach to Study Different Types of Locomotion in Association with Core Performance Erika Zemková, Magni Mohr, Dario Novak, Tomas Maly, 2024-11-11 Good posture and strong core muscles are essential for most athletic movements but also for everyday activities Among them walking and running require lumbo pelvic stability and mobility for efficient movement and high level performance This is especially important during a large range of trunk motions when changing the direction of movement an abrupt walk to run transition or extreme uphill and downhill walking or running Such repetitive trunk loading over time can contribute to occurrence of back problems and lower limb injuries To avoid these unwanted effects a novel approach to studying the physiology of locomotion in relation to spine motion and balance function is required This can provide a basis for designing exercise programs specifically tailored for competitive athletes the healthy general population as well as those suffering from movement disorders So far much effort has been devoted to investigating the biomechanical and physiological variations of

locomotion including walking running swimming or hopping However a surprising gap in the evidence is to what extent core strength contributes to effective locomotor performance and a healthy back Studying the neurophysiological mechanisms underlying the control of postural and core stability with special reference to locomotion is therefore of great importance

Wearable Sensor Technology for Monitoring Training Load and Health in the Athletic Population Billy

Sperlich,Hans-Christer Holmberg,Kamari Aminian,2020-02-13 Several internal and external factors have been identified to estimate and control the psycho biological stress of training in order to optimize training responses and to avoid fatigue overtraining and other undesirable health effects of an athlete An increasing number of lightweight sensor based wearable technologies wearables have entered the sports technology market Non invasive sensor based wearable technologies could transmit physical physiological and biological data to computing platform and may provide through human machine interaction smart watch smartphone tablet bio feedback of various parameters for training load management and health However in theory several wearable technologies may assist to control training load but the assessment of accuracy reliability validity usability and practical relevance of new upcoming technologies for the management of training load is paramount for optimal adaptation and health *Exercise as a Countermeasure to Human Aging, Volume II* Bradley

Elliott, Lawrence D. Hayes, Martin Burtcher, 2022-04-08 **Muscle Recovery After Exercise, Training and Competition: Physiological Indicators and Non-invasive Monitoring Techniques** Alessandro Moura Zagatto, Fábio Yuzo Nakamura, Michael R. Esco, 2020-05-21 The desire to improve muscle function and prevent overuse injuries from exercise and throughout training has led to the development of various methods to aid recovery and track readiness to perform Ergogenic aids such as cold water immersion massage and dynamic recovery procedures may have positive effects but the results of the related research remain equivocal Furthermore novel interventions in this scenario like compression garments ice vests and photobiomodulation therapy are promising but need more evidence based data to support their effectiveness Similarly to properly monitor individual physical conditioning there is a growing interest toward unobtrusive measures to accurately represent physiological status during and or after exercise There are several techniques being used such as subjective ratings of well being heart rate monitoring hormonal and hematological profile assessments However more sensitive indexes like heart rate variability and muscle activation voluntary and or involuntary are arising as attractive alternatives that may delineate physical conditioning status and readiness to perform more precisely than the aforementioned measures The purpose of this Research Topic is to critically evaluate and summarize recent data from observational and intervention studies related to non invasive methods designed to promote recovery and objectively monitor training status Their association to physical performance and physiological recovery in athletes during training and competition is a major focus of this Topic **Lunney & Oliphant's Tort Law** Donal Nolan, Ken Oliphant, 2023 The seventh edition provides a complete authoritative guide to the subject The book combines clear overviews of the law with well chosen extracts from cases and

Turner, 2025-08-19

The game of football is one of the most popular in the world and is followed by millions of spectators on all continents. In recent years, football has undergone technical, tactical, and physical evolution whereby players are subjected to ever higher physical stimuli. To be properly prepared, strength and conditioning coaches must use the most advanced scientific evidence to help inform decision making regarding conditioning their players. *Strength and Conditioning for Football: From Science to Practice* summarizes the current scientific evidence in the field for the sport. This evidence serves as a rationale for the decisions practitioners make with their football players to monitor and develop training programs that will help drive improvements in the relevant physical capacities for the game. This new book develops important arguments in football training with chapters examining such questions as 1. game model and training 2. monitoring and testing 3. recovery and match preparation and 4. youth and disability in football. This book offers critical information to readers aiming to succeed as strength and conditioning coaches in football and it will be required reading for students and practitioners alike in the fields of football, strength and conditioning, coaching, physiotherapy, and sport science.

Migration and Wellbeing Deirdre Hughes, Füsun Akkök, Gideon Arulmani, 2024-06-28

This timely and comprehensive book delves into this complex and multi-faceted phenomenon of migration and illuminates its diverse facets and its profound influence on societies across the globe. In an era marked by unprecedented global mobility as people move across continents in search of better lives, it has never been more crucial to explore the intricate tapestry of human migration. This volume examines the social, economic, and cultural dimensions of migration, uncovering stories of migrants and the transformative potential and hardships their journeys often entail. The twelve chapters in this book demonstrate the scale of challenges and opportunities that lie ahead. The contributors examine policy, practice, research, and professional development across various international, European, and national settings, all viewed through the perspective of career guidance and counselling. With a new chapter, conclusion, and a revised introduction, this book will be of value and interest to students, researchers, teachers, policymakers, guidance and counselling practitioners who have an interest in migration, human psychology, social science, youth work, mental health, counselling, education, and community development. The other chapters were originally published in the *British Journal of Guidance and Counselling*.

Conditioned Games for Team Sports Training Filipe Manuel Batista Clemente, 2025-04-24

Conditioned Games for Team Sports Training allows the reader to discover the dynamic world of conditioned games, popularly known as small-sided games. This groundbreaking book unlocks the secrets to revolutionizing training dynamics via comprehensive exploration of conditioned games, unveiling the unique characteristics that set conditioned games apart and examines the impacts of

manipulating task constraints on players acute responses and chronic adaptations Coaches seeking to elevate their teams and achieve specific training objectives have long relied on these modified game formats To address multiple coaching goals simultaneously these games are comprehensive exercises that require a thorough understanding of how to design them when to design them and why to design them This book is the first to offer a dual purpose resource a robust theoretical foundation detailing how task constraints impact team sports players then moving to provide examples for a number of major team sports demonstrating how to implement conditioned games and incorporate them into a weekly training schedule This new cutting edge volume is not just about theory it s also a practical guide that bridges the gap between research evidence and real world applications Whether you re a student or an academic in the field of sport coaching and performance or a practicing coach looking to transform your approach Conditioned Games for Team Sports Training serves as a roadmap to incorporating conditioned games and unlocking the full potential of your training activities to elevate your coaching game and bring a new dimension to your team s performance

Assessing the Therapeutic Uses and Effectiveness of Virtual Reality, Augmented Reality and Video Games for Emotion Regulation and Stress Management Federica Pallavicini,Stéphane Bouchard,2020-01-17

Human Movement and Motor Control in the Natural Environment Peter A Federolf,Maurice Mohr,Thorsten Stein,Gert-Jan Pepping,Steven van Andel,Gillian Weir,2023-06-08

The basic understanding of human movement and control of human movement stems largely from laboratory measurements where human movement can be quantified with high precision and accuracy but where the artificial environment compromises ecological validity A good example for this issue was demonstrated in a recent investigation specifically that the walking gait pattern of healthy individuals in a laboratory changed as a function of how many researchers were present during the experiment Observations like these underscore that study volunteers adapt their behavior to the specific laboratory environment and warrant the question of how well we can transfer our lab based understanding of gait patterns and the underlying neuromuscular control system to walking during daily living Another research area where lab based movement assessments have led to conflicting findings is the field of sports injury prevention Many neuromuscular training programs have been shown to be effective in reducing the sport injury rate in athletes by 30 50% or more in a variety of different multi directional sports Nevertheless lab based assessments of the same athletes who completed those training programs were often not able to detect improvements in motor control of sport specific movements or a reduction in joint loading two factors thought to be closely linked with sport injury risk This disconnect suggests that lab based assessments of movement and motor control are often poor indicators of player behavior during real game scenarios and may limit our ability to screen athletes for injury risk or monitor their progress in rehabilitation These examples highlight that we should strive for the assessment and investigation of human movement and motor control in natural environments i e where individuals patients athletes or other groups of interest perform explore and interact under real world conditions
