them adapt to this new teaching method Educators who come out of traditional academic institutions tend to use traditional methods when offering courses online e g lectures textbooks and readings examinations rather than attend to small group processes and principles of what the editors of this volume call andragogy This Handbook goes beyond the mechanics of how to create and direct an online learning experience to consider such a new approach to pedagogy in doing so The editors primary purpose is to clarify the conceptual issues that underlie effective online teaching and to offer practical guidance to educators and corporate trainers who plan to teach in a virtual environment Their central tenet is the adoption of computer networks as the teaching vehicle of the future demands a re examination of our core beliefs about pedagogy and how students learn The transfer of a classroom curriculum into cyberspace is deceptively simple but doing so without an appreciation of the nuances and implications of learning online ignores not only the potential of this medium but the inevitable realities of entering it Rather than fear the challenges that new technology brings to systems of learning the editors hope to help instructors embrace it by re thinking how knowledge is acquired and how educational processes may be optimally designed in a new age of teaching and learning Features Benefits Part I provides an overview and includes discussion of the unique structural aspects of the electronic learning environment pedagogical issues curriculum design psychological and group dynamics and ethical issues Part II examines practical issues associated with implementing courses online both in the traditional university setting and in professional corporate training environments The book draws heavily on personal case examples many from The Fielding Graduate Institute s 26 years of teaching in nontraditional distributed learning environments

**Credibility, Validity, and Assumptions in Program Evaluation Methodology** Apollo M. Nkwake, 2023-12-13 This book focuses on methods of choice in program evaluation Credible methods choice lies in the assumptions we make about the appropriateness and validity of selected methods and the validity of those assumptions As evaluators make methodological decisions in various stages of the evaluation process a number of validity questions arise Yet unexamined assumptions are a risk to useful evaluation The first edition of this book discussed the formulation of credible methodological arguments and methods of examining validity assumptions However previous publications suggest advantages and disadvantages of using various methods and when to use them Instead this book analyzes assumptions underlying actual methodological choices in evaluation studies and how these influence evaluation quality This analysis is the basis of suggested tools The second edition extends the review of methodological assumptions to the evaluation of humanitarian assistance While evaluators of humanitarian action apply conventional research methods and standards they have to adapt these methods to the challenges and constraints of crisis contexts For example the urgency and chaos of humanitarian emergencies makes it hard to obtain program documentation objectives may be unclear and early plans may quickly become outdated as the context changes or is clarified The lack of up to date baseline data is not uncommon Neither is staff turnover Differences in perspective may intensify and undermine trust The deviation from ideal circumstances

challenges evaluation and calls for methodological innovation And how do evaluators work with assumptions in non ideal settings What tools are most relevant and effective This revised edition reviews major evaluations of humanitarian action and discusses strategies for working with evaluation assumptions in crises and stable program settings
