Berry, Janis E. Johnston, Paul W. Mielke Jr., 2014-04-11 The focus of this book is on the birth and historical development of permutation statistical methods from the early 1920s to the near present Beginning with the seminal contributions of R A Fisher E J G Pitman and others in the 1920s and 1930s permutation statistical methods were initially introduced to validate the assumptions of classical statistical methods Permutation methods have advantages over classical methods in that they are optimal for small data sets and non random samples are data dependent and are free of distributional assumptions Permutation probability values may be exact or estimated via moment or resampling approximation procedures Because permutation methods are inherently computationally intensive the evolution of computers and computing technology that made modern permutation methods possible accompanies the historical narrative Permutation analogs of many well known statistical tests are presented in a historical context including multiple correlation and regression analysis of variance contingency table analysis and measures of association and agreement A non mathematical approach makes the text accessible to readers of all levels *50 years after the perceptron, 25 years after PDP: Neural computation in language sciences* Julien Mayor, Pablo Gomez, Franklin Chang, Gary Lupyan, 2014-08-11 This Research Topic aims to showcase the state of the art in language research while celebrating the 25th anniversary of the tremendously influential work of the PDP group and the 50th anniversary of the perceptron Although PDP models are often the gold standard to which new models are compared the scope of this Research Topic is not constrained to connectionist models Instead we aimed to create a landmark

forum in which experts in the field define the state of the art and future directions of the psychological processes underlying language learning and use broadly defined We thus called for papers involving computational modeling and original research as well as technical philosophical or historical discussions pertaining to models of cognition We especially encouraged submissions aimed at contrasting different computational frameworks and their relationship to imaging and behavioral data
