 assess the current or future state of the member system health and integrate it within a framework of available resources
 and operational demand As systems complexities have increased so have system support costs driven by more frequent and
 often enigmatic subsystem failures IVHM strategies can be used to mitigate these issues by taking a Systems of Systems view

Combined with advanced decision support methods this approach can be used to more effectively predict isolate schedule and repair failed subsystems reducing platform support costs and minimizing platform down time Integrated Vehicle Health Management System of Systems Integration brings together ten seminal SAE technical papers addressing the challenges and solutions to maintaining highly complex vehicles The strategy requires that the IVHM system must provide actionable decision support to operators and maintainers informing platform operational capabilities and maintenance procedures The goal is to prevent a given component from degrading to the point of failure or predictable impending failure Specifications should also reflect a common means for communicating this information to other health ready IVHM system components
