Human Exposure to Electromagnetic Fields Patrick Staebler,2017-05-24 Everyone whether they like it or not is exposed to electromagnetic fields most of the time at very low levels In this case they are inconsequential but they can cause adverse health effects when they become intense enough This topic is complex and sensitive Covering frequencies from 0 Hz to 300 GHz Human Exposure to Electromagnetic Fields provides an overview of this vast topic After a reminder of the concepts of electromagnetic fields the author presents some examples of sources of radiation in daily life and in the industrial or medical sectors The biophysical and biological effects of these fields on the human body are detailed and the exposure limits are recalled The exposure assessment and the implementation of the appropriate regulation within companies are also covered Technically and practically this book is aimed at people with a scientific background risk prevention actors health physicians especially occupational doctors and equipment designers **Biological Effects and Exposure Criteria for Radiofrequency Electromagnetic Fields** National Council on Radiation Protection and Measurements,1986

Radio-Frequency and ELF Electromagnetic Energies R. Timothy Hitchcock,Robert M. Patterson,1995-03-08 Tailored especially for the working health professional Radio Frequency and ELF Electrognmagnetic Energies is a practical guide to understanding evaluating and controlling the human health effects of radio frequency RF and extremely low frequency ELF electromagnetic fields Providing a perfect blend of applied information and theory you ll find all you need to know about radiation safety from the basic physics to how to set up a safety program This book brings you cutting edge discussions of exposure limits monitoring instrumentation new measurements required by human exposure standards induced currents and contact currents and the latest data on biological effects *Radio-Frequency Human Exposure Assessment* Joe Wiart,2016-03-14 Nowadays approximately 6 billion people use a mobile phone and they now take a central position within our daily lives The 1990s saw a tremendous increase in the use of wireless systems and the democratization of this means of communication To allow the communication of millions of phones computers and more recently tablets to be connected millions of access points and base station antennas have been extensively deployed Small cells and the Internet of Things with the billions of connected objects will reinforce this trend This growing use of wireless communications has been accompanied by a perception of risk to the public from exposure to radio frequency RF electromagnetic field EMF To address this concern biomedical research has been conducted It has also been important to develop and improve dosimetry methods and protocols that could be used to evaluate EMF exposure and check compliance with health limits To achieve this much effort has was made in the 1990s and 2000s Experimental and numerical methods including statistical methods have been

developed This book provides an overview and description of the basic and advanced methods that have been developed for human RF exposure assessment It covers experimental numerical deterministic and stochastic methods **Human Exposure to Electromagnetic Fields** Dragan Poljak,2004 The field of computational bioelectromagnetics has grown rapidly in the last decades but until now there has not been a comprehensive text on the many aspects of interaction between human beings and electromagnetic fields This text fills the gap *Personal Exposure to Radio Frequency Electromagnetic Fields and Implications for Health* Patrizia Frei,2010 Radio Frequency Radiation Dosimetry and Its Relationship to the Biological Effects of Electromagnetic Fields B. Jon Klauenberg,Damijan Miklavcic,2012-12-06 The North Atlantic Treaty Organization NATO has sponsored research supporting development of personnel safety standards for exposure to Radio Frequency Radiation RFR for over a quarter century NATO previously recognized that one of the most important tools used in the RFR effects research laboratory is accurate dosimetry when it supported a NATO Advanced Studies Institute ASI on Advances in Biological Effects and Dosimetry of Low Energy Electromagnetic Fields held in 1981 in Erice Sicily That meeting resulted in a NATO ASI publication Biological Effects and Dosimetry of l Non ionizing Radiation Radiofrequency and Microwave Energies The most recent NATO sponsored program on RFR was an Advanced Research Workshop ARW on Developing a New Standardization Agreement STANAG for Radio frequency Radiation held May 1993 at the Pratica di Mare Italian Air Force Base Pomezia Rome Italy That ARW produced an ASI proceedings published in 1995 Radio frequency Radiation Standards Biological Effects Dosimetry Epidemiology and Public Health Policy² The Rome ARW and the Proceedings served as a springboard to the much needed revision of the NATO Standardization Agreement STANAG 2345 MED Evaluation and Control of Personnel Exposure to Radio Frequency Fields 3 kHz to 300 GHz 3 which was subsequently promulgated in October 1998 One of the published recommendations developed by the Rome ARW was to hold this second ARW focusing on dosimetry and measurements Human Health and Exposure to Electromagnetic Radiation J. A. Dennis,1992 Electromagnetic Fields (300 Hz to 300 GHz) World Health Organization,WHO/IRPA Task Group on Electromagnetic Fields (300 Hz to 300 GHz),1993 A critical review of all data relevant to the assessment of human health effects associated with exposure to electromagnetic fields in the frequency range of 300 Hz to 300 GHz Emphasis is placed on new data that shed light on the interactions of electromagnetic fields with biological systems and on the specific biological effects and responses that result Over 500 recent studies were rigorously assessed Sources of exposure considered include broadcasting systems microwave ovens induction heating stoves visual display units television receivers dielectric heaters for industrial use radar installations and medical devices and procedures A chapter devoted to interaction mechanisms reviews the electrical properties of tissues and discusses direct and indirect interaction mechanisms including the interaction of biological bodies with electrical charges induced on ungrounded or poorly grounded metallic objects such as cars cranes wires and fences A review of the large body of data from cellular and animal studies considers the strength of evidence

pointing to effects on the nervous endocrine and immune systems on reproduction and on pre and post natal development The report concludes that most of the biological effects of acute exposure are consistent with responses to induced heating Data on human responses are assessed in the next chapter which addresses concern about the effects of locally elevated temperatures resulting from the deposition of radio frequency energy and the possible dangers particularly for pregnancy outcome linked to the use of visual display units The report concludes that current data provide no clear evidence of detrimental health effects in humans exposed to radiofrequency fields The remaining chapters provide guidelines for health hazard assessment and standards for protection
