Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know Energy Research Abstracts ,1985 **Computational Methods in Earthquake Engineering** Manolis Papadrakakis, Michalis Fragiadakis, Nikos D. Lagaros, 2010-12-06 This book provides an insight in advanced methods and concepts for structural analysis and design against seismic loading The book consists of 25 chapters dealing with a wide range of timely issues in contemporary Earthquake Engineering In brief the topics covered are collapse assessment record selection effect of soil conditions problems in seismic design protection of monuments earth dam structures and liquid containers numerical methods lifetime assessment post earthquake measures A common ground of understanding is provided between the communities of Earth Sciences and Computational Mechanics towards mitigating seismic risk The topic is of great social and scientific interest due to the large number of scientists and practicing engineers currently working in the field and due to the great social and economic consequences of earthquakes Operations Research Proceedings 2003 Dino Ahr, Roland Fahrion, Marcus Oswald, Gerhard Reinelt, 2012-12-06 This volume contains a selection of papers referring to lectures presented at the symposium Operations Research 2003 OR03 held at the Ruprecht Karls Universitiit Heidelberg September 3 5 2003 This international conference took place under the auspices of the German Operations Research Society GOR and of Dr Erwin Teufel prime minister of Baden Wurttemberg The symposium had about 500 participants from countries all over the world It attracted academians and practitioners working in various field of Operations Research and provided them with the most recent advances in Operations Research and related areas in Economics Mathematics and Computer Science The program consisted of 4 plenary and 13 semi plenary talks and more than 300

contributed papers selected by the program committee to be presented in 17 sections Due to a limited number of pages available for the proceedings volume the length of each article as well as the total number of accepted contributions had to be restricted Submitted manuscripts have therefore been reviewed and 62 of them have been selected for publication This refereeing procedure has been strongly supported by the section chairmen and we would like to express our gratitude to them Finally we also would like to thank Dr Werner Muller from Springer Verlag for his support in publishing this proceedings volume
