Industrial Robots Programming J. Norberto Pires, 2007-04-03 Industrial Robots Programming focuses on designing and building robotic manufacturing cells and explores the capabilities of today's industrial equipment as well as the latest computer and software technologies. Special attention is given to the input devices and systems that create efficient human-machine interfaces and how they help non-technical personnel perform necessary programming control and supervision tasks. Drawing upon years of practical experience and using numerous examples and illustrative applications, J. Norberto Pires covers robotics programming as it applies to the current industrial robotic equipment including manipulators control systems and programming environments. Software interfaces that can be used to develop distributed industrial manufacturing cells and techniques which can be used to build interfaces between robots and computers. Real-world applications with examples designed and implemented recently in the lab. Industrial Robots Programming has been selected for indexing by Scopus. For more information about Industrial Robotics, please find the author's Industrial Robotics collection at the iTunesU University of Coimbra channel.

Proceedings of the 2023 3rd International Conference on Modern Educational Technology and Social Sciences (ICMETSS 2023) Youbin Chen, Intakhab Alam Khan, Chaoqun Shen, Deepanjali Mishra, 2023-10-13 This is an open access book. 2023 3rd International Conference on Modern Educational Technology and Social Sciences ICMETSS 2023 was held on August 25-27, 2023, in Kuala Lumpur, Malaysia. Modern educational technology refers to the theory and practice of using modern educational theory and modern information technology to achieve teaching optimization through the design, development, utilization, management, and evaluation of teaching and learning processes and resources. Education and social science are the relationship between restriction and promotion. The relationship between education and social development is in short because of the development of social productive forces, the progress of science and technology, and the content, methods, and organizational forms of ancient education cannot meet the needs of the emerging bourgeoisie. In the new form of social development, people's knowledge ability has increasingly become the decisive factor in the development of modern productive forces. Education has become an important investment sector in the development of intellectual resources. Education investment is the most beneficial investment. It transforms the potential productivity of science and technology into real productivity. Finally, we must return to education and form lifelong education. ICMETSS 2023 will focus on the development of modern educational technology and social science, explore the relationship between them, and promote their development.
