Molecular Microbial Ecology Manual Antoon D. L. Akkermans, Jan Dirk Van Elsas, Frans J. De Bruijn, 2014-01-13 For a long time microbial ecology has been developed as a distinct field within Ecology In spite of the important role of microorganisms in the environment this group of invisible organisms remained unaccessible to other ecologists Detection and identification of microorganisms remain largely dependent on isolation techniques and characterisation of pure cultures We now realise that only a minor fraction of the microbial community can be cultivated As a result of the introduction of molecular methods microbes can now be detected and identified at the DNA RNA level in their natural environment This has opened a new field in ecology Molecular Microbial Ecology In the present manual we aim to introduce the microbial ecologist to a selected number of current molecular techniques that are relevant in microbial ecology The first edition of the manual contains 33 chapters and an equal number of additional chapters will be added this year Since the field of molecular ecology is in a continuous progress we aim to update and extend the Manual regularly and will invite anyone to deposit their new protocols in full detail in the next edition of this Manual We hope this book finds its place where it was born at the lab bench Antoon D L Akkermans Jan Dirk van Elsas and Frans J de Bruijn March 1995 Molecular Microbial Ecology Manual 1 3 6 1 8 1996 1996 Kluwer Academic Publishers

¹⁵N Tracing of Microbial Assimilation, Partitioning and Transport of Fertilisers in Grassland Soils Alice Fiona Charteris, 2019-10-28 This book presents innovative research on

soil nitrogen cycling and nitrate leaching with a view to improving soil management and fertiliser nitrogen use efficiency and reducing nitrogen leaching losses In this regard nitrogen 15 ^{15}N labelled fertiliser was used as a biochemical and physical stable isotope tracer in laboratory and field experiments The major outcome of the research was the development validation and application of a new compound specific amino acid ^{15}N stable isotope probing method for assessing the assimilation of fertiliser nitrogen by soil microbial biomass The novelty of the method lies in its tracing of incorporated nitrogen into newly biosynthesised microbial protein in time course experiments using gas chromatography combustion isotope ratio mass spectrometry The approach provides previously unattainable insights into the microbial processing of different nitrogen fertilisers in different soils Further it identifies the mechanistic link between molecular scale processes and observations of field scale fertiliser nitrogen immobilisation studies The method and the results presented here will have far reaching implications for the development of enhanced recommendations concerning farm based soil management practices for increasing soil productivity and reducing nitrogen losses which is essential to minimising environmental impacts **QA/QC**
