

MIB 303

Solids-retaining Centrifugal Separator

Application

The MIB 303 separation system is designed for centrifugal separation of sludge and water from mineral oil.

The separator is designed for oils with a maximum density of 900 kg/m³ at 10°C. The maximum separation temperature for gas oil and marine diesel oil is +40°C, and for lubricating oil +70°C, since this is the max. separation temperature for the separator.

Mineral Oil

The MIB 303 separator in a cleaning system for distillate and marine diesel oil should be operated as a purifier. For cleaning of lubricating oil, MIB 303 purifier or clarifier can be used.

Concept

The MIB 303 separator features a new design concept for solid bowl separators. Advanced manufacturing, design and drive technologies have contributed to a separator more compact and lightweight than conventional solid bowl models.

Features

- No lock ring. Requires only small mechanical force on opening/assembly of the bowl.
- New design allows the bowl seal to be taken out and cleaned with the disc stack still in place.
- New lightweight materials in bowl and discs.
- Direct drive with motor speed controlled by a frequency converter eliminates gears or belts.
- Requires no lubrication.
- The cleaned oil is discharged under pressure, due to the built-in piping disc pump.
- Frequency converter with built-in voltage protector.
