Kershner, 2003

The Commercial license preparation manual from Kershner's The Flight Manuals Series Bill Kershner believes that the average pilot could learn the basics of airplane performance very easily if the involved mathematics were bypassed. Therefore one of the purposes of this book is to bridge the gap between theory and practical application covering the fundamentals of airplane lift weight drag and thrust. If pilots know these basic principles of performance they will readily understand the effects of variable factors such as altitude and temperature on the operation of the aircraft. This manual's 21 chapters cover Airplane performance and stability for pilots. Checking out in advanced models and types. Emergencies and unusual situations. Advanced navigation. High altitude Operations. Preparing for the commercial knowledge and practical tests.

Visionary designer Jack Northrop built a series of experimental flying wing aircraft both before and during WWII. One of the most radical designs of the post war era the propeller driven YB 35 bomber's all wing design minimized drag and promised maximum payload capacity and terrific endurance. The YB 49 a turbojet powered variant built on the YB 35 airframe forever altered aviation history and inspired the design of the B 2 Spirit stealth bomber. Originally printed by Northrop Aircraft in 1948 the YB 49 Flying Wing Pilot's Flight Operating Manual taught pilots everything they needed to know before entering the cockpit.

Originally classified Restricted the manual was declassified long ago and is here reprinted in book form This affordable facsimile has been reformatted and color images appear as black and white Care has been taken however to preserve the integrity of the text
