*Language Mapping* Jürgen Erich Schmidt,2011-03-30 The Handbook of Language Mapping aims to explore the core methodological and theoretical approaches of linguistic cartography In both empirical and theoretical linguistics the spatial variation of language is of increasing interest and the visualization of language in space is therefore also of growing significance It is the precondition for correct data interpretation But how does it work What has to be considered when drawing a map And how has the problem been tackled so far This book provides answers to such questions by taking a closer look at the theoretical issues surrounding cartography and at the concrete practice of mapping The fundamental issues raised are addressed particularly well since linguistic geography is not only one of the domains with a lengthy tradition it is also one of the most progressive fields in linguistics At the same time because of their visual primacy linguistic maps directly confront the challenges of human perception and aesthetics In this context envisioning the fruits of language mapping is a fascinating and inspiring endeavor not just for experts With its accessible texts and wealth of full color images the handbook not only represents a comprehensive manual serving the interests of a variety of readers it also fills a gap in the ongoing linguistic discourse      **Administrative Notes** ,1993      **Monthly Catalog of United States Government Publications**

could have important consequences for the identification of new particles that decay to top quarks

*The Search for Supersymmetry in Hadronic Final States Using Boosted Object Reconstruction* Giordon Stark, 2020-03-13 This thesis represents one of the most comprehensive and in depth studies of the use of Lorentz boosted hadronic final state systems in the search for signals of Supersymmetry conducted to date at the Large Hadron Collider A thorough assessment is performed of the observables that provide enhanced sensitivity to new physics signals otherwise hidden under an enormous background of top quark pairs produced by Standard Model processes This is complemented by an ingenious analysis optimization procedure that allowed for extending the reach of this analysis by hundreds of GeV in mass of these hypothetical new particles Lastly the combination of both deep thoughtful physics analysis with the development of high speed electronics for identifying and selecting these same objects is not only unique but also revolutionary The Global Feature Extraction system that the author played a critical role in bringing to fruition represents the first dedicated hardware device for selecting these Lorentz boosted hadronic systems in real time using state of the art processing chips and embedded systems
