and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

Principles and Practice of Maternal Critical Care Sharon Einav, Carolyn F. Weiniger, Ruth Landau, 2020-11-25. This book contains a collection of the most recent insights regarding maternal morbidity and mortality and optimization of the care processes during acute critical illness. The volume represents a practical resource to be used in real time by medical practitioners faced with a woman who is critically ill during pregnancy and the peripartum period. By providing concise tools for disease identifiers and management flow charts, the Editors aimed to increase awareness and improve processes of care for this population. Many care paradigms for obstetric patients are currently unstandardized, unfocused, and often do not follow a pre-determined path. Each chapter will provide the practitioner with updated information on how to identify specific critical conditions and how to manage them once they have been identified to enhance recognition and readiness. This book should be used as a resource to improve the quality of care administered to obstetric patients to reduce fragmented care processes and to improve interdisciplinary coordination and communication with the overall aim of decreasing maternal morbidity and mortality. Therefore, this book represents an invaluable guide to specialists in critical care, anesthesia, and obstetrics, as well as to intensive care nurses and midwives.
