AT-Index Winka Dubbeldam, Archi-Tectonics, 2006 Publisher description **Pulsation in Architecture** Eric Goldemberg, 2012 Pulsation in Architecture highlights the role of digital design as the catalyst for a new spatial sensibility related to rhythmic perception. It proposes a novel critical reception of computational architecture based on the ability of digital design to move beyond mere instrumentality and to engage with core aspects of the discipline: the generative engine of digital architecture reinvigorates a discourse of part to whole relationships through the lens of rhythmic affect. There is a paradigm shift in spatial perception due to the intense use of computational techniques and the capacity to morph massive amounts of data in spatial patterns: rhythm plays a pivotal role in the articulation of the topology of buildings, generating the atmospheric character that induces moods and throbbing sensations in space. Pulsation introduces the fundamental animate capacity of living form and reshapes our perception of architectural space across the multiple scales of a project from digital inception to fabrication. An emerging thread of rhythmic sensibility loosely binds a survey of contemporary design practices including contributions by Peter Eisenman, Jeff Kipnis, Greg Lynn, UNStudio, Preston Scott Cohen, Reiser + Umemoto, Asymptote, Ali Rahim, Hernan Diaz Alonso, Ruy Klein, Gage Clemenceau, NOX, Evan Douglas, Studio kokkugia, and MONAD Studio.

Strange Objects, New Solids and Massive Things Winka Dubbeldam, 2022-01-05 The object as solid having three dimensions is not just a different formal trend but a paradigm shift: a reconceiving of how the architectural object is produced and experienced, changing the very concept of objectivity and meaning of architecture. This book celebrates the potential of the strange object, which finds its origin in the proto-space: the moment between the becoming of the idea and the ultimate shape it takes, the state of the still obscure and uninhibited object outside the established framework of signification. As seen through an examination of 10 projects by Archi Tectonics, this strange object is proof of the very capacity of the object to generate new habits and meanings. For close to a century, modernism was the norm presented to culturally aware citizens as the expression of modern life. It arrived hand in hand with medical advances, mass standardization, and a shared ideal of what the ease and speed of the modern lifestyle could offer. Only in the early years of the 21st century did our widespread allegiance begin to shift away from modernism and towards a new social realm. The digital revolution introduced online societies, niche cultures, and digital design. Digital manufacturing facilitated opportunities of surface patterning and the fabrication of one-off special building components, removing the constraints of standardization in the construction industry and celebrating the experimental. Testing designs through prototypes allows for a much more informed decision-making process. The focus is on precise, rigorous research and development rather than representational models. Now, after nearly two decades of implementing digital tools, we have reached a new platform where digital design and robotic production are the norm, and by extension, digital craft and integral design are as the future. This has been particularly important in the rethinking of advanced digital design processes. As showcased and examined in *Strange Objects, New Solids and Massive*
