The Cost-Effectiveness of 22 Approaches for Raising Student Achievement Stuart S. Yeh, 2011-03-01 As a consequence of the federal No Child Left Behind NCLB law there is tremendous pressure on school principals teachers school superintendents district staff state departments of education and governors to maximize the increase in student achievement that is obtained with every dollar of expenditure Currently

teachers are forced to rely on extremely inefficient approaches that take enormous amounts of time both during the school day and throughout the K 12 learning years This is experienced in terms of the reduced time that is available to teach subjects other than math and reading as schools resort to double periods of math double periods of reading and enormous amounts of remedial instruction that directly reduce the time available for other subjects including science art and music In contrast this book suggests that student achievement may be increased in a way that is not only cost effective in dollar terms but efficient in the sense that it does not rely on unusual investments in the time required to obtain results The book draws upon a wealth of cost effectiveness data to dispel common notions about what works in addressing the achievement gap increased expenditure per pupil charter schools voucher programs increased educational accountability class size reduction comprehensive school reform increased teacher salaries more selective teacher recruitment the use of value added methods to measure and reward teacher performance the use of National Board teacher certification to identify high performing teachers and a host of other approaches

Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community

templates that support each stage of the process and help school leaders scaffold the work of educators to put an aggressive turnaround plan into action while a leadership guide at the end of the book provides guidance to turnaround teams and facilitators
