Chapter 2 Business Processes and AIS Data

Chapter Overview

This chapter introduces basic concepts that are used throughout this text. The chapter introduces transaction cycles and AIS data. We present event identification guidelines to help students partition any business process into a set of events in a systematic manner. This chapter also introduces students to basic file concepts including transaction and master files, reference and summary data, and recording, file maintenance, and file update activities. We recommend covering this chapter regardless of the particular approach used in a specific AIS course. Further, we have found it useful to cover this chapter at a slow pace with adequate opportunities for practice. Mastering the fundamental concepts can help students learn the material in later chapters more easily.

Assignments

General information

Numerous problem-solving assignments are included in the chapter for practice. To ensure a smooth flow of chapter content, these exercises have been moved to the end of the chapter. Margin references are provided in the chapter. Encourage students to try the problems as they encounter these margin references. Solutions to these problem-solving exercises are at the end of the text to provide immediate feedback to students.

We have added a new section in the end-of-chapter material (Problem-Solving on Your Own) that provides extensions to the problem-solving exercises. Since solutions to the new section assignments are not included in the textbook, these might be better-suited for class discussion.

Additional assignment suggestions:

- **Accounting Software Exercises.** This is a series of problems that are available at the end of this chapter, as well as the end of Chapters 4, 6 7, 8, 9, 10 and 11. The purpose of

Business Process Management Michael Glykas, 2012-09-18 Business Process Management (BPM) has been in existence for decades. It uses, complements, integrates and extends theories, methods and tools from other scientific disciplines like strategic management, information technology, managerial accounting, operations management, etc. During this period, the main focus themes of researchers and professionals in BPM were business process modeling, business process analysis, activity-based costing, business process simulation, performance measurement, workflow management, the link between information technology and BPM for process automation, etc. More recently, the focus moved to subjects like Knowledge Management, Enterprise Resource Planning (ERP) Systems, Service-Oriented Architectures (SOAs), Process Intelligence (PI) and even Social Networks. In this collection of papers, we present a review of the work and the outcomes achieved in the classic BPM fields as well as a deeper insight on recent advances in BPM. We present a review of business process modeling and analysis and we elaborate on issues like business process quality and process performance measurement as well as their link to all other organizational aspects like human resources management, strategy, information technology, being SOA, PI or ERP, other managerial systems, job descriptions, etc. We also present recent advances to BPR tools with special focus on information technology, workflow, business process modeling and human resources management tools. Other chapters elaborate on the aspect of business process and organizational costing and their relationship to business process analysis, organizational change and reorganization. In the final chapters, we present some new approaches that use fuzzy cognitive maps and a recently developed software tool for scenario creation and simulation in strategic management, business process management, performance measurement and social networking. The audience of this book is quite wide. The first chapters can be read by professionals, academics and students who want to get some basic insight into the BPM field, whereas the remaining present more elaborate and state-of-the-art concepts, methodologies and tools for an audience of a more advanced level.
